GENERAL INFORMATION

Ration packs have been scientifically designed to fulfil the nutritional needs of most soldiers. The amount of protein, fat and carbohydrates are balanced to provide the correct ratios. There are certain products in the ration pack that have been fortified with vitamins and minerals to ensure that the soldier gets the nutrition that his/her body requires. There is no need for additional vitamin and mineral supplements when using ration packs, provided that the primary products in the pack are actually eaten. It is of vital importance to eat the products with the most nutritional value, being the canned products and dried fruit, as well as the products fortified with vitamins and minerals, being the porridge, energy bars, sweets and nutritional drink. Soldiers often keep the sweets, energy bars, dried fruit and sports drinks for their kids at home, or give it away to other people. This practice compromises the soldier's nutritional intake and should be discouraged. The main meals should be taken with friends. Putting together all the cans and flavouring it with other products can produce

quite interesting meals. For example: Heating the meatballs with some cheese gives a dish that is creamy and delicious. Making the meal a social occasion is pleasurable and will increase the amount that the soldiers eat.

"Best Before Date"

Every pack has been stamped with a code supplied by the SANDF and the "best before" date. This is not a magical date. The pack does not suddenly become inedible or toxic after that date. Most of the items in the pack have a long shelf life- much longer than the best before date. The item that limits the shelf life of the total pack is the cheese. According to the manufacturer, the minimum shelf life of the cheese is nine months. It can last longer if stored in good conditions. To accommodate this shelf life, the shelf life of the total pack is considered nine months. All the other products will still be in very good condition. In fact, the canned products will still last at least 18 months with the other products lasting up to 18 months, depending on the product.

Maintaining Adequate Hydration

An adequate fluid intake is imperative. It is essential that soldiers do not dehydrate, as dehydration will affect their physical and mental performance. Even a small dehydration will influence their ability to reason and impair physical performance. The isotonic sports drink powders may be used to flavour water. It is important for soldiers to monitor the colour of their urine as well as the volume of their urine. Check that the colour is light straw-coloured or even colourless. Darker urine may indicate that they are not drinking enough fluids. Note that some medicines and even food may influence the colour of the urine. It is important that a soldier knows his/her own body and can judge when they are not taking in enough water.

PROFESSIONAL SOLDIERS CARRY EVERYTHING WITH THEM, THEY DO NOT LITTER.
