

RFQ for servicing, calibration and repair of the BTP-Core pipettes

The BTP-Core requires their pipettes to be serviced, calibrated and repaired. In total there are 57 Gilson, Finnpipette and Labnet pipettes, consisting of single, multi-channel and stepper pipettes. The supplier should be able to service and repair all of these types and brands of pipettes. The supplier should be ISO/SANAS accredited and be able to supply accredited calibration and servicing reports. The pipettes should be serviced, calibrated and repaired in a rotation manner as to never leave the BTP-Core without any working pipettes. The supplier should also be able to supply the BTP-Core with replacement pipettes during the servicing process, if the need arises. Please see below the list of pipettes of the BTP-Core.

Pipette Make and Serial number
