3. SCOPE OF SERVICES

The scope of work is to provide preventative, corrective, and customer and user-maintenance of the Fire Detection and Suppression systems utilizing SANS 10139 and SANS 14520 National Standards as well as the manufacturers prescribed acceptable standards.

1.1. Preventative maintenance

Annual preventative maintenance visits that allow a competent technician to carry out a complete audit / check of the fire detection system, the documentation associated with the fire detection system, and the training requirements of users where necessary.

The fire detection system should receive at least annual major preventative maintenance visit a year. However, additional maintenance visits may be required depending on the complexity of the system, the environmental conditions, and the need to change 'any perishable items' e.g., batteries etc.

In addition.

The technician should complete a maintenance report whilst carrying out preventative maintenance of the fire detection system. The report should list any deviations of the system from the fully functional state, and should list relevant comments about the system e.g., smoke detectors, etc.

The report will help the SABC and/or user to monitor the reliability of the fire detection system to ensure the system meets its original purpose and will assist the budgeting of any replacement parts required in the future. A copy of the report should be made available to the SABC Office on completion of the maintenance for record and further attention purposes either by way of emails or hard copies.

Corrective Maintenance and Response Times

Corrective maintenance calls are the emergency maintenance of a system, or part thereof, carried out in response to the development of a fault.

Suitable communication should be used to ensure the SABC and/or user can be informed of expected arrival times to site. Response times shall therefore be a feature of the service contract / maintenance agreement. Strictly Confidential

In addition

Corrective maintenance report on completion of corrective maintenance should be generated by the technician who should complete a maintenance report and give a copy to the SABC and/or user.

1.2. Customer and user maintenance

Whilst it is recognized that this Code of Practice should not place requirements on the SABC, it is important that the SABC as the customer is aware of the importance to provide user maintenance to the Fire detection and Suppression system. The SABC would also conduct a periodic review of Fire detection system's effectiveness to ensure it is still doing what it was intended to do in order to be able to report any fault to the service provider.
