

Detail technical evaluation criteria: Drone Kit

	Factor	Weight	Sub-factor	Score
1	Supplier must be an accredited supplier of the product by the manufacturer	50%	Supplier must provide a letter to this effect from the manufacturer of the product endorsing them. This helps ensure that we not only receive equipment that is to spec from a reputable supplier but that we also ensure good backup service on this very specialised equipment	100% of weighting
2	All equipment must be 100% the same as that listed in the tender document	50%	If we have listed a TB60 flight battery it cannot be another generic type flight battery as this would likely compromise the duration and safety of flight operations and compromise supplier warranties etc.	100% of weighting
	Total	100%		

The threshold on the technical evaluation criteria is 80% overall. Tenders would be deemed technically unacceptable if they score less and will thus not be evaluated further.
