1. Background Information

Petroleum Sciences (PS) is a section within the Research, Testing and Development (RT&D) business unit of Specialised Testing and Sustainable Energy Research (STSER) department. Petroleum Sciences consist of 9 chemical laboratories which are strategically located within South Africa. These laboratories focus on providing an analytical service to various divisions, groups and departments within Eskom, SA Industries contracted to Eskom as well as countries outside South Africa. The laboratories also engage in research activities to ensure that the assets of Eskom are protected by controlling the quality of products it uses within the scope of operations. The laboratories also engage in the global arena to ensure that Eskom is on par with new technologies and products.

Laboratory instruments require spares and repairs on regular basis, and services as when required, the laboratory performs a large amount of analysis on transformer oil samples where a number of those samples are analysed on daily basis. Maintenance of instrumentation is often required to keep them running. The below mentioned instrumentation play a vital role in providing information on the performance of a transformer. Condition monitoring of transformers is critical for Eskom Line groups.

2. Objective of the Consumables for HPLC, GC and Headspace Instruments

The services provided by the Petroleum Sciences laboratories are an essential aspect in the value chain of maintenance of transformer and switchgear equipment. Transformer equipment is a strategic component in the generation, transmission, and distribution of electricity in the country. Hence, poor maintenance due to poor quality or no testing can be catastrophic.

It is therefore a requirement to have a standing contract for the maintenance, servicing, supply of spares and consumables for the laboratory equipment to maintain uninterrupted service delivery to the customer. Supply of certified reference materials (CRM) Gas standard for Transformer oil analysis as a primary standard according to IEC/ISO 17025 requirements.
