NIMS	National Information and Monitoring System (NIMS) is an electronic system used to record information regarding safe railway operations within the Republic of South Africa as per National Railway Safety Regulator Act (Act 16 of 2002 as amended)

2. TERMS OF REFERENCE

2.1. INTRODUCTION

- 2.1.1 The Railway Safety Regulator (RSR) was established in terms of the National Railway Safety Regulator Act, Act 16 of 2002 (“the Act”) as amended.
- 2.1.2 The RSR is an agency of the Ministry of Transport and comprises a Board, Chief Executive Officer (appointed by the Minister), Executive management, and staff.
- 2.1.3 The primary legislative mandate of the RSR is to oversee and enforce safety performance by all railway operators in South Africa including those of neighbouring States whose rail operations enter South Africa. Notwithstanding the foregoing, operators are, in terms of the Act, primarily responsible and accountable for ensuring the safety of their railway operations.
- 2.1.4 The RSR has embarked on the strategic route to facilitate the development of the Safety Risk Model (SRM) with the South African railway industry. The SRM will provide an overall framework of safety risk against which opportunities for safety improvement could be evaluated. It is a model consisting of a series of fault and event trees representing a set number of hazardous events which may collectively define the overall level of risk on the railway. The SRM also provides a structured representation of the causes and consequences of potential occurrences arising from railway operations and maintenance.

2.2. BACKGROUND

2.2.1 RSR DATA MANAGEMENT

- 2.2.1.1 In terms of the National Railway Safety Regulator Act (Act 16 of 2002 as amended, the Act), the Regulator must establish a National Information and Monitoring System (NIMS) regarding safe railway operations within the Republic of South Africa. This provision is emphasised under Section 39 of the Act which states that “the Regulator must establish a national railway safety information and monitoring system” hereinafter referred to as “NIMS”. The information to be captured on the system may include the following:

- 2.2.1.1.1 a register of safety permit holders,
- 2.2.1.1.2 railway occurrences and incidents,
- 2.2.1.1.3 security matters,
- 2.2.1.1.4 occupational health and safety matters, and
- 2.2.1.1.5 any other matter the board deems necessary.

2.2.1.2 The railway occurrence and incidents data captured on NIMS is used in analysing the risk of South African railway operations. It is also used in the development of an Annual State of Safety Report (ASoSR) in compliance with Section 20 of the Act. The ASoSR contains information on the safety of railway workers, the public and the environment associated with railway operations within South Africa. The ASoSR is used as a risk information tool by the RSR, railway operators, the industry, stakeholders and any other party interested in safety of South African railway operations.

2.2.1.3 The ASoSR provides an analysis of harm to persons (inclusive of the public, passengers and workforce); this harm is expressed as fatalities and weighted injuries (FWIs). This equivalent measure is calculated using the following formula: [number of fatalities] + 0.1 x [number of injuries]. That is, 10 injuries are equivalent to 1 fatality regardless of the seriousness of the injury. The contributions across the occurrence and incident categories to harm are presented in order to provide an understanding of the initiating events or sources of reported harm levels.

2.2.2 DEVELOPMENT OF A RAILWAY HAZARD LOG

2.2.2.1 The preliminary phase in the development of a Railway Safety Risk Model (SRM) includes problem definition, data information collection and analysis, and finally hazard identification. These are listed in a Hazard Log as precursors to hazardous Events (HE). A Hazardous Event is an incident that has the potential to be the direct cause of safety harm. Estimates of frequency (likelihood or probability) and potential harm (severity of impact) of hazardous Events will be encoded into the model to derive a risk rating.

2.2.2.2 A Hazard Log is a record keeping tool applied to tracking all hazard analysis, risk assessment and risk reduction activities for life cycle of a safety-related system. It is the single source of record for all risk management activities. The hazard log developed

through this project will only include the risk rating prior to interventions. The effectiveness of the interventions will be determined once the safety risk model has been developed and implemented and improved data collection enables the detail analysis of the precursors.

2.2.2.3 The Hazard Log is a structured process of capturing and referencing safety risk evaluations and other information relating to a railway system, it is to be coordinated and controlled whilst maintaining an auditable record of that information. It is the principal means of tracking the status of all identified hazards, decisions made, and actions undertaken to reduce the risk.

2.2.2.4 The RSR has in the past two years, with the support of Railway Industry representatives, developed a Railway Hazard Log. Using the fault tree analysis, the Hazard log thus identified 63 hazards. The Hazard Log is currently undergoing validation foreseen to be completed not later than December 2021.

2.2.2.5 The hazard log and related information may be accessed in a RSR information repository under the following URL - <https://www.rsr.org.za/knowledge-centre/>

2.2.3 DEVELOPMENT OF A RAILWAY SAFETY RISK MODEL (SRM)

2.2.3.1 The SRM is a model consisting of a series of fault and event trees representing a set number of hazardous events which may collectively define the overall level of risk on the railway. It also provides a structured representation of the causes and consequences of potential occurrences arising from railway operations and maintenance.

2.2.3.2 The SRM will provide an overall framework of safety risk against which opportunities for safety improvement could be evaluated.

2.2.3.3 The primary objectives of the SRM are to provide:

2.2.3.3.1 an understanding of the nature of the current risks on the railway.

2.2.3.3.2 risk information and risk profiles relating to the railway network.

2.2.3.4 The SRM is developed to assist and support operators to:

- 2.2.3.4.1 reduce risks on the railway network by identifying and controlling the hazards and the precursors to hazardous events which may occur;
- 2.2.3.4.2 provide estimates of the extent of the current risks on the railway network;
- 2.2.3.4.3 enable 'as low as reasonably practicable' (ALARP) assessments and cost benefit analyses to be carried out;
- 2.2.3.4.4 assist in identifying additional control measures which would reduce risk;
- 2.2.3.4.5 develop risk-based improvement planning;
- 2.2.3.4.6 understand key risk contributors and develop mitigation strategies; and
- 2.2.3.4.7 assist in identifying and prioritising issues for audit.

2.2.3.5 In addition to the risk information collated as described paragraph 3.1 and 3.2 above, the RSR has embarked on a project to develop a quantitative risk assessment model for railway safety risk. Similar models have been developed and tested by the United Kingdom's Rail Safety and Standards Board (RSSB) and the Australian Rail Industry Safety and Standards Board (RISSB). and other markets including EU and Middle East, are in the process of developing/implementing some form of SRM.

2.3. PURPOSE

- 2.3.1 The purpose of this Terms of Reference (TOR) is to appoint a service provider to render specialist support in developing a Safety Risk Model (SRM) together with the South African railway industry not later than 31 March 2023. The RSR will engage the service provider principally for the following reasons:
- 2.3.1.1 To provide specialised services for the specified periods without any obligation of permanent employment;

2.18. FRONTING

2.18.1 The RSR supports the spirit of broad based black economic empowerment (B-BBEE), and recognizes that real empowerment can only be achieved through individuals and businesses conducting themselves in accordance with the Constitution and in an honest, fair, equitable, transparent and legally compliant manner. It is therefore against this background the RSR condemns any form of fronting.

2.18.2 The RSR, in ensuring that bidders conduct themselves in an honest manner will, as part of the bid evaluation processes, conduct or initiate the necessary enquiries/investigations to determine the accuracy of the representation made in bid documents. Should any of the fronting indicators as contained in the Guidelines on Complex Structures and Transactions and Fronting, issued by the Department of Trade and Industry be established during such enquiry/investigation, the onus will be on the bidder I contractor to prove that fronting does not exist. Failure to do so within a period of 14 days from date

of notification may invalidate the bid/contract and may also result in the restriction of the bidder/contractor to conduct business with the public sector for a period not exceeding ten years, in addition to any other remedies the RSR may have against the bidder/contractor concerned.

CERTIFICATE OF INDEPENDENT BID DETERMINATION

This Standard Bidding Document (SBD) must form part of all bids¹ invited.

1. Section 4 (1) (b) (iii) of the Competition Act No. 89 of 1998, as amended, prohibits an agreement between, or concerted practice by, firms, or a decision by an association of firms, if it is between parties in a horizontal relationship and if it involves collusive bidding (or bid rigging).² Collusive bidding is a pe se prohibition meaning that it cannot be justified under any grounds.
2. Treasury Regulation 16A9 prescribes that accounting officers and accounting authorities must take all reasonable steps to prevent abuse of the supply chain management system and authorizes accounting officers and accounting authorities to:
 - a. disregard the bid of any bidder if that bidder, or any of its directors have abused the institution's supply chain management system and or committed fraud or any other improper conduct in relation to such system.
 - b. cancel a contract awarded to a supplier of goods and services if the supplier committed any corrupt or fraudulent act during the bidding process or the execution of that contract.
9. This SBD serves as a certificate of declaration that would be used by institutions to ensure that, when bids are considered, reasonable steps are taken to prevent any form of bid-rigging.
10. In order to give effect to the above, the attached Certificate of Bid Determination (SBD 9) must be completed and submitted with the bid:

¹ Includes price quotations, advertised competitive bids, limited bids and proposals.

² Bid rigging (or collusive bidding) occurs when businesses, that would otherwise be expected to compete, secretly conspire to raise prices or lower the quality of goods and / or services for purchasers who wish to acquire goods and / or services through a bidding process. Bid rigging is, therefore, an agreement between competitors not to compete.
