Background

A total of 32 holes will be marked, core drilled and painted (internally) through the upper raft of approximately 3000mm concrete slab of Unit 1 and Unit 2, the slab is more than 30 years old with rebars. Also core drilling through 500mm Auxiliary Building wall.

The drainage holes are 200mm in diameter and arranged in groups of 4 (four). The holes are 600mm apart. Each hole is fitted with an anti-vortex device at its top end and a 250mm diameter drainage pipe connected to its lower end, i.e., to the soffit of the upper raft. The drainage pipes attached to soffit of the upper raft are arranged in pipe assemblies. Each pipe assembly consists of 4 pipes connected by a base plate with bracing between the pipes for stability during a seismic event.
