### **The provision of a penetration testing tool intended for use by the internal ICT team to conduct efficient, security assessments of internally developed small-medium sized web applications for the period of twelve (12) months**

**RFP No. 3725/16/04/2026**

#### **1. INVITATION FOR PROPOSAL**

Proposals are hereby invited for the supply of a penetration testing tool intended for use by the internal ICT team to conduct efficient security assessments of internally developed small- to medium-sized web applications

The purpose of the Request for Proposal (RFP) is to obtain capability, pricing and general information on the business of potential Contractors for the CSIR to determine the Contractors most capable of providing the service.

This RFP document details and incorporates, as far as possible, the tasks and responsibilities of the potential bidder required by the CSIR.

This RFP does not constitute an offer to do business with the CSIR but merely serves as an invitation to bidder(s) to facilitate a requirements-based decision process.

Responses to this Request for Proposal (hereinafter referred to as a "Bid" or "Proposal") are requested from suitably qualified entities (hereinafter referred to as a "Respondent" or "Bidder") for the provision and supply of the penetration testing tool for the CSIR.

#### **2. PROPOSAL REQUIREMENTS**

All proposals are to be submitted in a format specified in this enquiry. However, bidders are welcome to submit additional / alternative proposals over and above the originally specified format.

## **2.1. Technical Proposal**

The following must be submitted as part of the **technical** proposal:

Penetration testing tool capability matrix highlighting the required:

- Company Profile
- Client reference
- Functional Coverage
- Governance, Control and Safety
- POPIA & Data Handling
- Reporting
- Training and Support

## **2.2. Financial Proposal:**

The following must be submitted as part of the **financial** proposal:

- Cover Letter.
- Completed Pricing Schedule (**Annexure D**) on official company letterhead.
- CSD registration report (RSA suppliers only).

## **3. PROPOSAL SPECIFICATION**

### **1. Introduction and Purpose**

The penetration testing tool is intended for use by the internal ICT team to conduct efficient, security assessments of internally developed web applications for a period of twelve months.

The primary purpose of the tool is to enable information security analysts to perform lightweight, automated penetration testing on designated applications. It is designed for early detection and continuous assurance, identifying common security weaknesses before they propagate to production or are discovered through formal, manual penetration tests.

#### **Intended Use Case**

- First-Pass Testing: Initial, automated vulnerability discovery in development, staging, or pre-production environments.

- Supplemental Analysis: Provides intermediate-level analysis, including contextual risk identification and potential exploit paths.
- Internal Assurance: Supports compliance verification and internal control testing as part of the organisation's governance framework.
- The testing of internally developed and managed web applications (including APIs with web interfaces).
- The testing of applications hosted on:

On-premises infrastructure or cloud environments (AWS, Azure, GCP) under organisational control.

## **2. Testing Methodology and Standards Alignment**

The penetration testing tool's testing engines, vulnerability checks, and reporting must be explicitly aligned with globally and locally recognised frameworks:

- OWASP Top 10: Comprehensive coverage of the current OWASP Top 10 web application security risks.
- ISO/IEC 27001:2022 & 27002
- NIST Cybersecurity Framework

## **3. Testing Behaviour**

- The penetration testing tool must be available as a cloud-based solution (SAAS)
- Safe & Controlled: Testing must be non-disruptive. The tool must incorporate safeguards to prevent Denial-of-Service (DoS) conditions, data corruption, or service instability.
- Repeatable & Auditable: All tests must generate detailed, timestamped logs. Testing activities and parameters must be repeatable for validation and audit purposes.
- Context-Aware: Findings must be presented with contextual risk, including potential exploit chains and business impact, not just generic vulnerability matches.
- Risk Identification: Specifically flag vulnerabilities (e.g., injection flaws, broken access control, sensitive data exposure) that could lead to the unauthorised access, loss, or disclosure of personal information.
- Risk Classification: Findings must be classifiable by their potential impact on the confidentiality and integrity of personal information.

- Data Handling: The tool must not facilitate or perform the unauthorised exfiltration, storage, or processing of actual personal information for testing purposes. If personal information is inadvertently accessed, the tool must support secure, logged handling and prompt reporting procedures.

#### **4. Authorisation, Data Handling an Evidence Retention**

- The tool must integrate with or support a formal internal authorisation process.
- Credential & Session Management: Secure storage for authentication credentials with role-based access and encryption at rest.
- Test Artefacts: All captured data (requests, responses, extracted metadata) must be encrypted in storage and in transit.
- All logs, screenshots, and reports must be stored in a secured, access-controlled repository.
- Retention periods must be configurable and align with organisational data retention policies.

#### **5. Reporting & Outputs**

The tool must generate consolidated, professional reports containing:

1. Executive Summary: Non-technical overview of testing scope, key risks, and overall security posture.
2. Detailed Technical Findings
  - Description and technical details.
  - Contextual Risk Rating (e.g., CVSS-based).
  - Affected URL/parameter and proof-of-concept (request/response).
  - Clear, actionable remediation guidance.
3. Supporting Evidence: Integrated screenshots, tool logs, and request/response captures.
4. Testing Methodology & Scope Statement.
5. Format must be suitable for both security engineers (technical detail) and system owners (remediation tasks).
6. Must support export to formats (e.g., PDF, HTML)

#### **6. Training & Support**

SS-F-SPU-026 Rev 02 Request for Proposal  
**RFP No. 3725/16/04/2026**

- Instructor-led (virtual or physical) onboarding training tailored for Security Analysts, covering tool deployment, configuration, safe operation, and interpretation of results (at most 3 days).
- Advanced training on leveraging the tool for intermediate analysis and exploit path development.
- Training on tool limitations, common false positives/negatives, and manual validation techniques.

## **7. Support & Documentation**

- Clearly defined vendor support for a period of twelve months including local/regional support coverage considering South African business hours.
- Comprehensive, searchable online documentation and knowledge base.
- Quarterly security update briefings for the tool's scanning engines and vulnerability checks.

**N.B: Bidders who meet all the minimum threshold under technical functionalities will be shortlisted and subsequently required to provide a live demonstration of the proposed system.**
