SECTION 3: BACKGROUND, OVERVIEW AND SCOPE OF REQUIREMENTS

1 BACKGROUND

In accordance with the Transnet SOC Limited accounting policy on Property, Plant and Equipment, rail infrastructure assets are to be carried at revalued amounts. The policy requires that an independent valuation be performed every three years, applying internationally acceptable and appropriately benchmarked valuation techniques.

The previous valuation was performed in 2022.. The determined the value of infrastructure assets to be approximately R224.7 billion as of 31 March 2022 using Depreciated Optimized Replacement Cost (DORC) method. The valuation project was limited to specific N1, N2, N3 and S lines – which were a representative sample of the total network classification. DORC was calculated based on inputs obtained from a sample of components within these lines and then applied to the entire population. The valuation method applied followed International Financial Reporting Standards specifically IFRS 13: Fair Value Measurement.

2 EXECUTIVE OVERVIEW

Whereas Transnet is seeking a partner(s) to provide solutions for its valuation of TRIM's network Infrastructure assets nationally, it also seeks to improve its current processes for providing these Services to its end user community throughout its locations.

The selected Service provider(s) must share in the mission and business objectives of Transnet. These mutual goals will be met by meeting contractual requirements and new challenges in an environment of teamwork, joint participation, flexibility, innovation and open communications. In this spirit of partnership, Transnet and its Service provider(s) will study the current ways they do business to enhance current practices and support processes and systems. Such a partnership will allow Transnet to reach higher levels of quality, service and profitability.

Specifically, Transnet seeks to benefit from this partnership in the following ways:

- 2.1 Transnet must receive reduced cost of acquisition and improved service benefits resulting from the Service provider's economies of scale and streamlined service processes.
- 2.2 Transnet must achieve appropriate availability that meets user needs while reducing costs for both Transnet and the chosen Service provider(s).
- 2.3 Transnet must receive proactive improvements from the Supplier/Service provider with respect to supply/provision of Services and related processes.
- 2.4 Transnet's overall competitive advantage must be strengthened by the chosen Service provider's leading-edge technology and service delivery systems.
- 2.5 Transnet end users must be able to rely on the chosen Service provider's personnel for service enquiries, recommendations and substitutions.
- 2.6 Transnet must reduce costs by streamlining its acquisition of Services, including managed service processes on a Group basis.

3 SCOPE OF REQUIREMENTS

Transnet is calling for proposals from an experienced service provider for the once-off independent valuation of TRIM's Network Infrastructure Assets.

The core rail network infrastructure assets are classified in the following major engineering disciplines, excluding facilities (e.g. warehouses, depot buildings, etc.):

- Permanent way
- Civil Structures (Technical Support)
- Catenary and Traction Power Provision (OHTE and Substations)
- Train Authorisation Systems - TAS (e.g., Signalling, etc.)
- Condition Assessment Systems - CAS
- Telecommunication Systems

The above engineering disciplines can be further broken down into categories as indicated in Table 1 below.

Table 1: Engineering discipline categories

Permanent way	Civil Structures & Network technical buildings (Technical Support)	Catenary and Traction Power Provision (OHTE and Substations)	Train Authorisation Systems - TAS (e.g. Signaling, etc.)	Condition Assessment Systems - CAS	Telecommunication Systems
Rails	Bridges	OHTE	Colour-light signaling (CTC equipment, relay room equipment & outside equipment)	Weighbridges	Wireless Systems (e.g. Radio systems, Microwave systems)
Sleepers and fastening system	Tunnels	Traction Substation	Dark territory (CTC equipment & outside equipment)	Hotbox Detectors	Optic fibre cable
Turnouts	Culverts	Transmission Line	Protected level crossing systems		Optic fibre cable transmission system equipment
Ballast	Earth retaining structures				
	Level crossings				
	Embankment/ Formation/ Drainage				

The scope of this project will entail the following with the associated deliverables:

A fair assessment of the current condition of the assets listed in Table 1 to arrive at the valuation of the network. It is proposed that the valuation will consider the following inputs:

- Trolley inspections on the identified lines (in conjunction with the relevant Network maintenance depots).
- Visual inspections of the relevant assets (in conjunction with the relevant Network depots) inclusive of the relevant infrastructure such as relay rooms, and substations.
- Analysis of infrastructure measurement data (e.g., Infrastructure Measurement Vehicle (IMV) data for track and OHTE, and Ultrasonic Measurement Car (UMC) data).
- Analysis of system failure data and statistics (e.g. network/chronic failures, speed restrictions etc.).
- Analysis of relevant condition assessment reports provided by TRIM.

The deliverables are as follows:

- a. Report on the current infrastructure condition.
A fair assessment of the estimated remaining lifespan of the assets listed above.
- b. Report on the estimated remaining lifespan.
- c. Report on the New Equivalent Asset Price (NEAP).
A fair assessment of the New Equivalent Asset Price (NEAP) of the assets listed above.
- d. Report on the DORC Analysis.
Establishing the current value of the Depreciated Optimized Replacement Cost (DORC) of the assets listed above.
- e. Report on the total rail network infrastructure valuation results.
Total rail network infrastructure valuation view.

The valuation method must adhere to internationally acceptable accounting standards with specific reference to IFRS 13.

The project will focus on the sections listed in Table 2 below. The approach will follow a representative sampling process where the sections indicated in Table 2 forms the scope of the lines to be analysed, followed by extrapolated valuation of the rest of the network.

The results of these samples will then be applied across the entire rail network infrastructure (based on sound scientific and logical assumptions) to get an estimated valuation figures applicable to the total network.

The requirements and scope listed above are all mandatory.

Deliverables:

The key deliverables of this project will contain the following:

- Report on the current infrastructure condition.
- A fair assessment of the estimated remaining lifespan of the assets listed above.
- Report on the estimated remaining lifespan.
- Report on the New Equivalent Asset Price (NEAP).
- A fair assessment of the New Equivalent Asset Price (NEAP) of the assets listed above.
- Report on the DORC Analysis.
- Establishing the current value of the Depreciated Optimized Replacement Cost (DORC) of the assets listed above.
- Report on the total rail network infrastructure valuation results.
