PRICE ADJUSTMENT FOR INFLATION

Summary

No	Description
A	0

Type in description of formula which is carried through below

GENERAL NOTES :

CPA conditions may apply if the contractual duration is to be longer than 12 months. Eskom's default position is for Prices to be Fixed for the first 12 months, then CP be applicable thereafter.

- a. References to "indices" below have the meaning of "cost indices or reference prices", unless otherwise stated.
- b. Where historical information is applicable as requested below, internet address references which are accessible to the general public may be submitted instead, with the specific electronic route and web page reflecting the applicable data.
- c. Each formula is related to one unique currency. Mixing of currencies in a specific formula is not acceptable.

CPA FORMULA REQUIREMENTS :

- i. Formulae must be linked to independent cost indices or other benchmarks ("reference prices") and must be clearly and completely defined. The source must be a recognised statistical publishing source and must not be in-house indices.
- ii. Local Indices: Where local indices other than SEIFSA or StatsSA are specified, the tenderer is to submit 5 years' historical data for such indices. Note that the Contractor must ensure that indices are published and recommended by the "Source" as applicable to the work involved. For example SEIFSA has terminated the publication of Table E and is replaced by Table E-A and or E-EX and the specific sub breakdown of such must be identified. Also SEIFSA recommends utilisation of Table L-2 for road transport rather than Table L-1.
- iii. Foreign Price Adjustments: In the case of foreign price adjustments, the Contractor is to submit 5 years' historical data for the tendered indices. Where a formula is linked to indices in a country, payment of the amounts for that formula must be in the currency of the same country. A formula may not be linked to indices of more than one country.
- iv. Commodity Price Linked Payments: The reference price is considered as the base price (index) for purpose of the CPA formula and is included in the applicable tables below and must be in the currency in which the CPA will be payable. The exchange rate applied to convert the base price in a foreign currency into that of the currency of the formula must also be indicated in the tables below if the price is not in the same currency as the applicable formula.. ie exposure to the movement in a reference price is in the same currency as that of the CPA formula. The Contractor is to submit 5 years' historical price data for such commodity,
- v. London Metal Exchange (LME) Prices: For metals traded on the LME, the tonnage will be required before contract award in order for Eskom to hedge the metal price fluctuations. This applies also for prices linked to local indices or reference prices. Though these metals are traded in US\$, prices are daily quoted in various other currencies. The LME price in the currency of the formula must apply and thus not the US\$ unless the amount payable in terms of the formula is US\$. Refer to the "LME" Sheet in this file for more detail regarding this aspect. By indicating any of these metals in the formulae below, the contractor declares that neither he nor any other body avails or will avail of forward price and/or currency cover for the metal(s).
- vi. CPA Base Date: The CPA base date for calculating price movements is the Base Date as defined in the Particular Conditions, Clause 1.1.3.1. For indices or reference prices published as at certain dates, and where such a date is not the Base Date, the latest date for which it is published before the Base Date will be considered as the Base Date index or reference price. In instances where the figure or value is not as at the Base Date or considered as the Base Date index or reference price as explained herein, the date, figure or value as well as the reason for the deviation must be clearly separately stated and must be realistic for purposes of the price adjustment.
- vii. Period for Movement in Indices: The period for which the movement in indices or reference prices is considered, is the period until the last day of the month prior to the month in which the work in question was executed or completed (or in which an event or activity for which the adjustment applies, took place). For indices or reference prices published as at certain dates, and where such a date is not the last day of the month prior to the month in which the work was executed or completed (or an event or activity took place), then latest date for which the indices or price references are published before the last day of the month prior to the execution or completion of work (or an event or activity took place) is considered as the last day index or reference price of the month prior to execution or completion of work (or event or activity).
- viii. Proportions/weighting/coefficients/base reference in CPA Formulae: The fixed portion of each formula, not subject to inflation, is at least 15% and contractors may submit higher fixed portion percentages. The indices or other benchmarks and their proportions in the formula must be realistic and relative to the applicable work. The fixed portion and other proportions must add up to 100%.
- ix. Base Index or Reference Price : The base index or reference price must be inserted in the appropriate column

FORMULA No:

						Exchange rate for converting base			
Index	Proportion / Coefficient / Weight / Base reference price	Description / Scope of Index (eg Labour)	Title/Definition : Linked to the index, e.g., Table C3, All hourly paid employees. Must be completely defined	Source of Index (indices prepared by (e.g. SEIFSA, StatsSA, LME)	Base month for CPA if not Base Date as defined (See Note vi above)	Formula Currency Code	Currency Code	Exchange Rate Currency 1,00 =	Historical Data provided (Yes/No/Inter net address)
