ICASA LICENCES ARE REQUIRED FOR THE FOLLOWING AREAS:

- * INDIVIDUAL ELECTRONIC COMMUNICATION NETWORKS SERVICES (I-ECNS) OR**
- * INDIVIDUAL ELECTRONIC COMMUNICATION SERVICES (I-ECS)**

☐ **PLEASE TICK APPLICABLE BOX**

AREA: DR RUTH SEGOMOTSI MOMPATI DISTRICT MUNICIPALITY (NORTHWEST PROVINCE)	YES	NO
SUBSTANTIATE: 		

***In terms of the Electronic Communication Act of 2005 as amended, a Class ECNS license limits license holder to only rolling-out Electronic Communication Network Services in a particular district or municipality.**

N.B tender documents will be available on e-Tender portal www.etender.gov.za

Proposals are requested for the the appointment of a panel of access network providers that will provide layer 2 managed services at minimum 10mbps scalable to 100mbps for usaasa3 in 291 facilities in the dr ruth segomotsi mompati district municipality (north-west province) for a period of twenty- four (24) months.

1. BACKGROUND ON DR RUTH SEGOMOTSI MOMPATI DISTRICT MUNICIPALITY

The Dr Ruth Segomotsi Mompoti District Municipality is one of the 4 districts of the North-West province of South Africa. The district is comprised of five local municipalities: Greater Taung, Kagisano-Molopo, Naledi, Mamusa and Lekwa-Teemane. Some sites are in Ratlou Local Municipality which is not part of Dr Ruth Segomotsi Mompoti District Municipality. As part of the USAASA sites connectivity project, 291 sites will be connected to the Internet using the BBI national network. Figure 1 below shows the DR Ruth Segomotsi Mompoti District Municipality mapped with the Broadband Infracore national long-distance network.

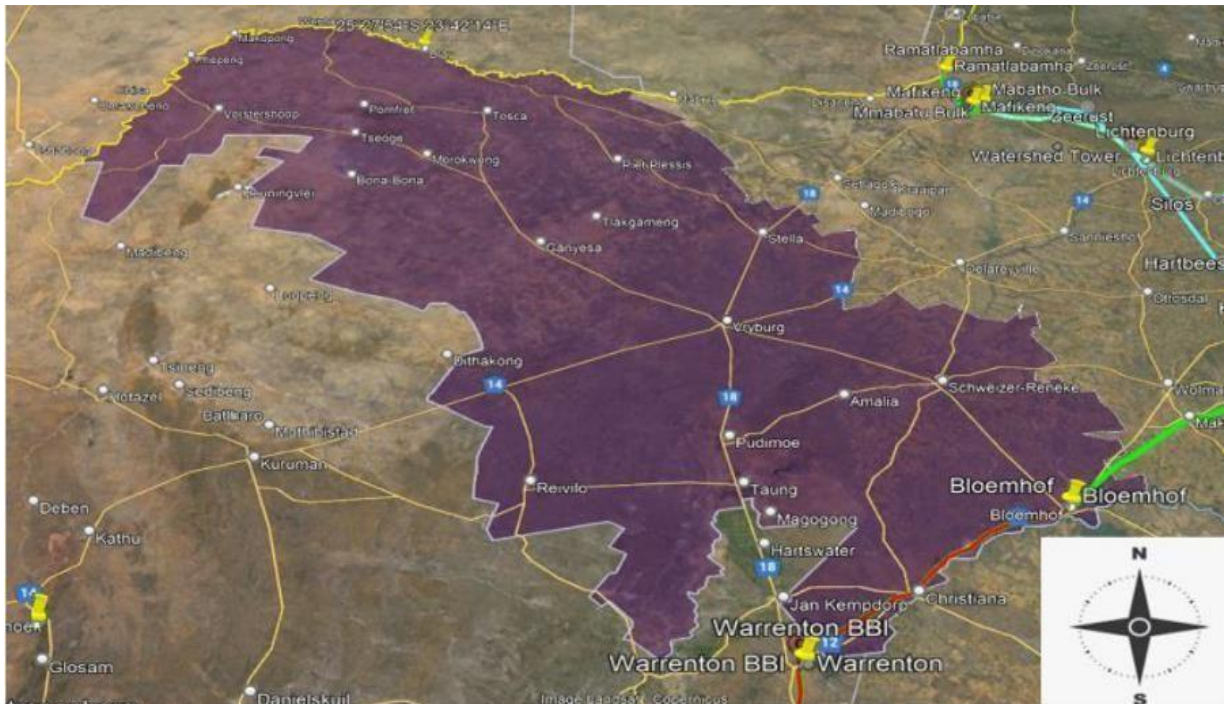

Figure 1 Dr Ruth Segomotsi Mompoti District Municipality

2. PROPOSED SOLUTION

2.1 USSASA SITES CONNECTIVITY REQUIREMENTS

A total of 291 sites in DR Ruth Segomotsi District that are part of this proposal will be provided with an Internet solution, based on the following USAASA requirements.

Broadband Infracore is expected to provide dedicated broadband connectivity services to Organisations and Institutions located within the targeted district municipality. Organisations and Institutions may include Government Buildings, Educational Institutions, Health Facilities, Medium to Large Enterprises and others.

The following minimum specifications are required per Organisation/Institution:

- Dedicated bandwidth of not less than 10Mbps symmetric per Organisation/Institution. This is in line with South Africa Connect – South Africa's Broadband Policy Targets and will be required and measured continually for compliance up to 2030. Each access link must be scalable from 10Mbps to 100Mbps dedicated and uncontended per site.

- The service is expected to be highly stable and reliable.
- The service provider must have 24x7x365 coverage for technical assistance and/or helpdesk facilities.
- All necessary hardware, cabling and software (if required for Internet service) should be provided and set up by the service provider.
- Each Organisation/Institution must be provided with relevant equipment (CPE) to enable connectivity to the access network, which must be installed by the service provider at each Organisation/Institution.
- BBI must be able to manage the Customer Premises Equipment (CPE).
- Each organization must have WiFi access to the internet connectivity that covers the critical areas of the institution such as the administration area, laboratories, libraries and the congregation areas.
- A maximum of five (5) access points (APs) must be made available per institution whilst deployment will depend on the size of the institution. Some sites are so small, we recommend only a CPE, one indoor AP and one outdoor AP.

2.2 NETWORK DESIGN PRINCIPLES

- The network design principles are as follows:
- Broadband Infraco network design must meet USAASA minimum requirements.
- Broadband Infraco offers a highly available end-to-end managed Internet service to all sites.

2.3 DESIGN ASSUMPTIONS

The design assumptions are as follows:

- Municipalities will supply cooling, reliable power and the required space on site.
- Broadband Infraco will be responsible for Layer 3.
- Access network provider (ANP) will be responsible for a managed Layer 2 connectivity.

KEY DELIVERABLES FOR THE APPOINTED SERVICE PROVIDER

- Provide Layer 2 connectivity in all the identified facilities (291) in DR Ruth Segomotsi District municipality for a period of 2 years.
- The services shall be provided on a Build, Operate and Transfer Model (BOTM)
- The access network shall be transferred to Broadband Infraco (BBI) SOC Limited at the end of the 2-years' service period.

2.4 SOLUTION OVERVIEW

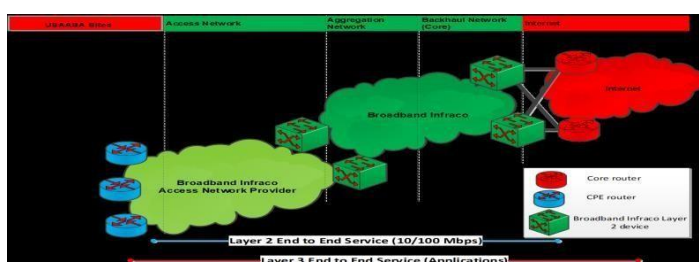

Figure 2: Overall End to End Solution

The overall solution consists of the IP/MPLS Core network that will be used to deliver the traffic to any of the 3 Teraco POP sites for Internet connectivity. In each region, there will be two IP/MPLS Core routers for redundancy that will be used to aggregate traffic from the respective sites.

The internet service will be the primary application at the USAASA sites; therefore the Internet service should be both resilient and highly available. The proposed solution takes this requirement into account and uses the 3 core routers at the Teraco PoP sites:

In Dr Ruth Segomotsi District Municipality, the sites will be connected to the available BBI PoP sites. In Northwest region, the available PoP sites are:

- Mafikeng
- Ramatlabama
- Lichtenburg
- Ventersdorp
- Potchefstroom
- Klerksdorp
- Bloemhof
- Potchefstroom
- Warrenton

The ANPs would be requested to backhaul the aggregated traffic to the Teraco Midrand/Isando Data Centre if the above BBI PoPs are unavailable to backhaul the traffic from all the USAASA sites.

The identified organisation/Institution will be equipped with a small router (CPE), indoor and outdoor Wifi-7 capable access points. The customer premises equipment (CPE) and the access points (AP) will be procured from the OEM Huawei. The core IP network is from Cisco and the aggregation and access equipment from Huawei.

The deployed solution will be managed using the Huawei management system by the network operations (NOC) department of Broadband Infraco. This would ensure that the existing management system will be used by BBI NOC to have a management view of the access devices that are deployed in this project. The client USAASA has a portal view of the Huawei iMaster Network Management system.

The Figure below summarises the end-to-end solution by focusing on how traffic from USAASA sites that are aggregated at BBI PoP in the region will be transported via the IP Core network to the any of the three TERACO sites, where Internet connectivity will be provided

Figure 3: Example of end-to-end Site Connectivity

The solution is covered in detail below by focusing on the following sections:

- USAASA Sites connectivity
- Access Network
- Aggregation Network
- IP/MPLS Core
- Network Management System

2.4.1 USSASA SITES CONNECTIVITY

Figure 4: USSASA Sites Connectivity

The network infrastructure at the customer facility consists of the CPE router. The router will also provide PoE based power to the access points. The access points will be placed at the strategic points to ensure that important facility areas (e.g laboratory, staff room, library, assembly/waiting area etc) are given sufficient coverage.

The CPE router will be a high-performance device combining business-class features with performance, security, and reliability. The router specified for this environment should be perfect for the small enterprise, branch, or small home office network.

2.4.2 ACCESS NETWORK

Broadband Infraco proposes to establish a Layer 2 point to point wireless/microwave Access Network links to connect targeted Organisations/Institutions to the nearest existing Broadband Infraco PoP. Space and power will be required at these sites for establishment of wireless links for the last mile. Broadband Infraco will install equipment at customer sites for the service and for effective end to end management of the links. Access Service Providers based in the respective districts will be used to connect the identified facilities to the nearest BBI PoP. The deployed technology used by the ANP must meet the customer requirements and must be highly available. The Layer 2 Managed Service is protected and highly available from Aggregation to the facility.

- The Access/Last Mile network service provider/s can either use any of the fixed solution & fixed wireless solution medium/s for connectivity that can meet a layer 2 Ethernet service that is MEF 2.0 compliant.
- Each access link must be scalable from 10Mbps to 100Mbps dedicated and uncontended per site. Access/Last Mile equipment must be Metro Ethernet Forum (MEF 2.0) compliant;
- , including the installation of cabinets, ip equipment, access points and cabling
- Where applicable, specify whether you are in possession of a valid frequency spectrum license issued by ICASA (provide details) and indicate the frequency spectrum band to be used for the solution.

The service provider should propose an Access/Last Mile network solution that provides Broadband Infraco (BBI) with these following capabilities per each site:

- a) Monitoring, maintenance and support services for all relevant sites.
- b) Supply monthly performance reports for each of the sites.
- c) Provider hosted NOC or Portal to view activated services.
- d) Flexible capacity allocation/bandwidth provisioning capability.
- e) Provision of Quality of Service (QoS) across the entire access network, including performance statistics for each site.
- f) Clear cable and connection labelling on all connections.
- g) Local presence for effective operations and maintenance.

All surveys installations, testing, and handover will be subject to Broadband Infracore Quality Management Standards, which will be done as per Broadband Infracore Certified ISO 9001 Process.

Access Network Test Results	Compliance with Broadband Infracore and ITU standards
Installation Compliance and Quality Assurance	Compliance with Broadband Infracore standards
Layer 2 End-to-end testing	RFC2544, Y/1564

Layer 2 Link - Parameters

Throughput (Committed Information Rate)	≥ 10 Mbps
Frame Loss Ratio (%)	$\leq 1\%$
Latency (Frame Transfer Delay)	≤ 70 ms
Jitter (Frame Delay Variation)	≤ 30 ms
Maximum Transmit Unit (MTU) Size	≥ 1518

Service provider must provide:

- L2 managed service from the facility to BBI aggregation site.
- **Install:**
 - Equipment housing cabinet.
 - Layer 3 equipment
 - Access Points and necessary cabling.

Broadband Infracore (BBI) will provide to the appointed Service Provider:

- Site layout for each facility.
- Housing Cabinet
- Layer 3 Equipment; APs and associated accessories for installation.

2.4.3 AGGREGATION NETWORK

Broadband Infracore shall use its nearest existing PoPs to aggregate identified sites in the respective districts via wireless/microwave and back haul them to regional MPLS Core router.

For aggregation, a router that support a combination of 1G and 10G ports will be used. This router will terminate all traffic from the remote sites as depicted in the figure above.

These aggregation routers will receive a 1G interface from the Access Provider NTU. The Access Provider NTU has the 3 functioning responsibilities to tunnelling all traffic coming from municipality sites as VLANs on the 1G trunk port that will be connected to the aggregation router.

The aggregation router will be a router that is built to meet service provider requirements for Carrier Ethernet access. It should be optimized for remote access and central offices, for smaller aggregation sites where a full-featured, small-footprint converged platform is needed. The router should offer service flexibility and delivers Layer 2, IP, and MPLS transport for advanced L2VPN, L3VPN, and multicast services.

Aggregation router will be used to extend MPLS into the access layer by allowing Broadband Infracore to initiate MPLS-based Layer 2 and Layer 3 VPN services from within the access layer. These routers will give Broadband Infracore the ability to expand MPLS toward the network edge and thus gain the advantages of a single unified MPLS control plane across the entire network.

Aggregation routers should offer a choice of AC and DC power supplies, which are redundant and built into the chassis. The router should support modular operating system, which is designed to provide modular packaging, feature velocity, and powerful resiliency.

2.4.4 TRANSMISSION NETWORK

The project to upgrade (10Gbps add/drop at Oberholzer, Klerksdorp, Potchefstroom, Bloemhof, Warrenton including Mafikeng and Ramatlabama to the Botswana border) is in progress and to be completed soon.
