BID NAME

BID NUMBER

(HD 01-2022.23)

1. INTRODUCTION AND PURPOSE

Tender for the supply and delivery of a specialised vector control service to the City of Tshwane as and when required for a period of 3 years.

The tender requires the services of a registered pest control operator for the application of the identified vector control measures. The tender also requires the operator to administer the control measures and educational service as and when required.

2. BACKGROUND

According to section 24 of the Constitution of the Republic of South Africa as amended, everyone has the right to an environment that is not harmful to their health and well-being. Chapter seven of the Constitution also states clearly as one of the objects of the Local Government: "to promote a safe and healthy environment".

Municipal Health Service has a legal obligation according to the National Health Act, 61 of 2003, also Health Act, 63 of 1977 to ensure that a safe and healthy environment do not include infestations and population explosions of any known vectors which can lead to creating an unhealthy environment for the residents of the city.

The main vectors affecting the city are as follows:

	Vector
1	Flies
2	Rodents – rats and mice
3	Mosquito's
4	Cockroach, Lice, bedbugs

The Department is looking to appoint one service provider to operate across all seven regions of the city.

Therefore, a competent and registered service provider is required in order to ensure a safe and healthy environment for all in the City of Tshwane.

3. PROJECT SCOPE

3.6 Description of vector applications

3.6.1 The Control of Flies

The control of flies is generally a seasonal problem which is generally caused by excessive heat and rotting material, carcasses. Generally, it is important to try and control the larvae of the flies before the flies fly away. Flies usually breed when they are attracted to a site due to a stench cause. It is therefore sometimes important to control the odor first and then spray the flies after. Mosquitoes can be found at various sites for control as described below:

Flies will generally be found being attracted to waste sites, abattoirs, sewerage farms, waste bins, and stored waste food.

Firstly the odor needs to be sprayed and brought under control. Thereafter the larvae can be sprayed to kill them and prevent them from hatching.

Procedure: Spray mix using knapsack sprayer or a large power sprayer can be used to control the flies.

Time limit: Reaction time of 12 hours.

Flying flies that are grouping together must be sprayed with a fogger so that the mist is then used to kill the flying flies.

Procedure: Spray mix using fogging machine.

Time limit: Reaction time of 12 hours

3.6.2 The control of rodents

Rodents can be rats or mice. These rats and mice are attracted to living areas when they are looking for food. Rodents are more prevalent in offices and living areas during the dryer months when there is no food in the veld.

Rodents are particularly attracted to areas where there is lots of waste food in offices, living areas, rubbish dumps, waste bins etc. Rodents carry various diseases which can indirectly contaminate the food that humans eat as well as their urine and fesses can infect humans.

Rodents are quite common in informal settlements, blocks of flats and buildings used for sheltering homeless people in Tshwane.

Safety is important as the poison can also affect the health of humans if eaten. The bidder must ensure that the bait blocks are locked in bait boxes or in cardboard boxes, depending on the rodent colony.

Dead carcasses must be removed and incinerated especially when bait is places in high density residences like informal settlements, flats or places of human refuge.

Buildings

Bait Placement: The chemical is to be placed at the following rates:

Bait Blocks- 2 per bait station

Pellets 50 grams per bait station

Tracking powder 50 grams per bait station. (Tracking powder is to be mixed with white maize meal at a ratio of 1:10)

Time limit: Reaction time of 12 hours

Outdoors

This may be out in the veld, drains, informal settlement etc.

Bait Placement:

Place two blocks in each rat burrow.

Survey the problem area. Establish where the rodents are running to and from (their paths are easily traced by the oily dirt smears along the walls and beams) and identify the type infesting your premises

Rodents are creatures of habit and prefer to use the same paths repeatedly.

Place the bait blocks on or as close to the paths as possible, as rodents seldom deviate from these paths to feed.

A recommended practice is to place the bait in such a way to prevent domestic animals and children from gaining access to blocks.

3.6.3 The Control of Mosquitoes

Mosquito's are generally a seasonal problem which is generally caused by stagnant water. Work orders are generally issued by the Environmental Health Inspectors from the Environmental Health Division. Work orders will only be issued if mosquito's become a health hazard in the city. Mosquitoes can be found at various sites for control as described below:

Aquatic sites, undeveloped areas, natural areas.

Include all rivers and streams where water is stagnant and mosquito larvae are breeding. Mosquitoes can also be found in large areas where containers are holding stagnant water and they are breeding, for example: large dust bins, tyers etc.

Procedure: Spray mix using knapsack sprayer on the stagnant water in these areas.

Time limit: Reaction time of 12 hours

Swimming pools, dams and vlei areas

Include all rivers, streams, vlei's, and where water is stagnant and mosquitos are breeding.

Procedure: A small power sprayer may be used for small dams or swimming pools.

Boats and adapted equipment for control of Mosquito Larvae must be used on large dams by the tenderer. Example: Centurion Lake, Rietvlei dam etc.

3.6.4 The control of cockroaches, lice and bedbugs (SANS 10204:2004)

The following site may be infested and create a health habit for the residents of the city.

- Municipal blocks of flats
- Shelters for the homeless
- Drains in buildings and on streets
- Kitchens, areas where food or waste food are stored.
- Medical facilities
- Informal Settlements

When spraying chemical mix these areas ensure that all personnel, inhabitants, their belongings, clothing, food and animals have been removed from the area before spraying commences. Place warning signs at the entrances.

All windows and other vents must be closed. The air conditioners must be switched off, if possible.

Only once spraying has been completed and the areas has been ventilated may people be allowed to return.

Beds and mattresses must be stripped of any bedding before they are sprayed for bed bugs. If possible and the facilities allow it the mattresses should be removed out doors and sprayed and once dry, then be returned to the base.

If the areas need to be fumigated with spray can foggers, then the inhabitants and animals have to leave the area and only return the next day. Once they enter the facilities the next day, the windows must be opened to air the place. The cleaning staff can then clean up the dead insects, if any.

The bidder must arrange with the contact person for a time and date when spraying will commence. The contact person of the CoT will then arrange with the inhabitants to evacuate.

Time limit: Reaction time of 12 hours after receiving the request from the clerk of works.

3.7 Operational Procedures

CERTIFICATE OF INDEPENDENT BID DETERMINATION

- 1 This Municipal Bidding Document (MBD) must form part of all bids¹ invited.
- 2 Section 4 (1) (b) (iii) of the Competition Act No. 89 of 1998, as amended, prohibits an agreement between, or concerted practice by, firms, or a decision by an association of firms, if it is between parties in a horizontal relationship and if it involves collusive bidding (or bid rigging).² Collusive bidding is a *pe se* prohibition meaning that it cannot be justified under any grounds.
- 3 Municipal Supply Regulation 38 (1) prescribes that a supply chain management policy must provide measures for the combating of abuse of the supply chain management system, and must enable the accounting officer, among others, to:
 - a. take all reasonable steps to prevent such abuse;
 - b. reject the bid of any bidder if that bidder or any of its directors has abused the supply chain management system of the municipality or municipal entity or has committed any improper conduct in relation to such system; and
 - c. cancel a contract awarded to a person if the person committed any corrupt or fraudulent act during the bidding process or the execution of the contract.
- 4 This MBD serves as a certificate of declaration that would be used by institutions to ensure that, when bids are considered, reasonable steps are taken to prevent any form of bid-rigging.
- 5 In order to give effect to the above, the attached Certificate of Bid Determination (MBD 9) must be completed and submitted with the bid:

¹ Includes price quotations, advertised competitive bids, limited bids and proposals.

² Bid rigging (or collusive bidding) occurs when businesses, that would otherwise be expected to compete, secretly conspire to raise prices or lower the quality of goods and / or services for purchasers who wish to acquire goods and / or services through a bidding process. Bid rigging is, therefore, an agreement between competitors not to compete.
