1.1.8 Modern Flow (Workflow Automation) and requisitions management.

These Systems are currently used by NRCS Finance, Facilities, SCM and HCM including all the employees when dealing with related activities like requisitions, leave applications, performance management, payment of vendors, budget management, invoices posting and statements runs.

2. Background

2.1 NRCS acquired the licenses or the right to use these systems, designed, customized, configured and developed them as part of the implementation to ensure that they serve organizational requirements to the extent that was possible. The project for design, configuration, development and deployment of the system has gone live and currently NRCS requires a support and maintenance partner through which the system can be supported and maintained to ensure availability, accessibility, and usability of the system to discharge the organisation's mandate.

The main goal of this SCM process is to ensure that the systems are usable to enable the organisation to achieve its operational, tactical and strategic objectives as per its mandate.

2.2 The implementation was undertaken with a desire to adopt the system standard business process. However, in some of the scenarios, the system designed, customized, and developed specifically to meet NRCS' business processes' requirements to facilitate the

declaration of levies and submission of requests for services. Currently the SAGE 300 and SAGE 300 people are hosted on NRCS' environment, while the Microsoft Dynamics 365 Customer Engagement and Direct Hire are hosted on their vendors' respective clouds and integrated to the internally hosted SAGE 300 systems. The NRCS is responsible for the support, maintenance, and administration of the Microsoft Windows operating system server on which the system is hosted. The NRCS ICT Team is further responsible for access to the System and the Operating System as well as the Security of the network and the infrastructure.

- 2.3** Some of these systems use IIS as the webserver to serve the application and integrate to other platforms and are predominantly running with Windows Servers with Ms. SQL Serving at a Database Management System (DBMS).
- 2.4** NRCS ICT Team does not have the technical expertise and knowledge about the system design and development, hence the requirement for support and maintenance partner to appointed to ensure that the system serves the business desired operational and strategic objectives.
- 2.5** The NRCS ICT Team subscribes to a formal Change Management process through which proposed changes to the systems are coordinated and approved before they are implemented.

3. Scope of work

The scope of work includes 2 major areas: firstly, Business Applications Support and maintenance which pertains to Microsoft Dynamics, SAGE 300, SAGE 300 People (ESS and MSS, Performance Management), New Leaf and Direct Hire (eRecruitment). This scope is intended to ensure that all the issues that prevent business users from fulfilling their duties and tasks are promptly attended to and resolved to the satisfaction of the customers of the NRCS. The expectation is also to ensure that systems perform optimally without clichés and bugs that impact the operational sustainability of the NRCS.

The second part of the scope is intended to provide technical support and maintenance of these systems and their integrations while ensuring sustainable availability, usability and reliability of the systems. This technical support and maintenance pertain to support of the NRCS staff in investigating and fixing bugs, implementation of new enhancement requests, installation of new versions and security updates and skills transfer to the NRCS staff. These two areas are detailed below:

Incidents for issues received by the help desk will be given a Severity Code from 1 – 4 based on how important responding to the problem is to the primary business of the entire NRCS, as well as the availability of workarounds. The Severity Code will be the basis for scheduling work on the backlog and assigning resources to the request. Critical, important, and supportive application functions are defined in the section below on Application Function Type.

Severity Code	Definition
1	A problem has made a critical application function unusable or unavailable and no workaround exists.
2	A problem has made a critical application function unusable or unavailable, but a workaround exists. or A problem has made an important application function unusable or unavailable and no workaround exists.
3	A problem has diminished critical or important application functionality or performance, but the functionality still performs as specified in the user documentation.

4

The problem has diminished supportive application functionality or performance.
