FORM T2.2.3 – CENTRAL SUPPLIER DATABASE (CSD)

Paragraph 14(1)(a) of the Municipal Supply Chain Management Policy states that the municipality must keep a list of accredited prospective providers of goods and services that must be used for the procurement requirements. Saldanha Bay Municipality has decided to accept an invitation from Provincial Treasury to join the Western Cape Supplier Database (WCSD) with the view of using one centralized database. However, on 01 July the Municipality will make use of the Centralised Supplier Database. This decision was taken based on the advantages it holds for our suppliers as well as our organization's procurement processes. All prospective providers of municipal goods and/or services are hereby requested to register their business with the CSD.

The usage of the Centralised Supplier Database came into effect on 01 July 2016. REGISTRATION WILL BE COMPULSORY IN ORDER TO CONDUCT BUSINESS WITH SALDANHA BAY MUNICIPALITY. The database will be used to verify the accreditation of a supplier before an award can be made.

All prospective suppliers should be aware of the amended codes of good practice under section 9 (1) of the Broad-Based Black Economic Empowerment Act as issued by the Minister of Trade and Industry (Gazette No.36928) on 11 October 2013.

Enquiries can be made to Mr. H. Siecker at 022 701 7070.

SCOPE OF WORKS

1. INTRODUCTION

Saldanha Bay Local Municipality (SBLM) supplement their water supply from groundwater resources, especially during the dry summer months. Abstraction at the Langebaan Road wellfield (both wellfield 1A and 1B), Hopefield wellfield and Hopefield Town Boreholes forms part of the phased augmentation of water from groundwater supplies.

In 2019 an application was awarded to SBLM for a Water Use Licence (WUL) to utilise the groundwater resource at the Langebaan Road 1A and 1B wellfields, with specific monitoring requirements forming part of the WUL. An amendment WUL was issued in February 2025 to correct the licenced volumes.

In 2023 an application was awarded to SBLM for a Water Use License (WUL) to utilise the groundwater resource at Hopefield wellfield, with specific monitoring requirement forming part of the WUL. An amendment application is currently in process.

A Water Use License (WUL) application is currently in process for the Hopefield Town Boreholes.

The hydrogeological services required by SBLM include the monitoring and management of the existing wellfields.

The tender period will commence on the date of the signing of the contract till 30 June 2029 to assist SBLM with:

- Specific WUL required groundwater monitoring at the Langebaan Road and extended areas.
- Specific WUL required groundwater monitoring at the Hopefield wellfield and extended areas.
- Specific WUL required groundwater monitoring at the Hopefield Town Boreholes and extended areas.
- Calibrate the existing numerical aquifer and wellfield model for Langebaan Road and Hopefield wellfields. The current model was completed in FeFlow.
- Provision of specialist inputs on development applications that involve utilisation of groundwater or developments that could negatively impact on groundwater on an ad hoc basis.
- Water pollution incident reporting on an ad hoc basis.
- Presenting monitoring results at the Langebaan Road, Hopefield wellfield and Hopefield Town boreholes water monitoring committee meetings and providing

secretariat services for the meetings. Update the committee's constitution and update the Ground Water Management Plan as and when required by the committees.

- Compile the Ground Water Management Plan and constitution for the Hopefield Town Boreholes water monitoring committee.
- Organising quarterly project meetings and provide secretariat services for the meetings.
- Build and maintain a database in GIS format (currently DASH) and have the necessary software and licensing.
- Appointing of sub-consultants to conduct external audits
- Investigate the extension of the Hopefield Wellfield to increase the yield to optimise the utilisation of the current water infrastructure.

3		Calibrate numerical aquifer and wellfield model	

	3.1	Langebaan Road Aquifer (LRA) and Hopefield (HPF) Wellfield Combined Numerical Model	3.1.1 Calibrate existing numerical aquifer and wellfield model for Langebaan Road Aquifer and Hopefield (HPF) Wellfields (2 calibrations during the contract period) A numerical model was completed in FeFlow by December 2025 and reviewed by June 2026. The existing FeFlow model needs to be recalibrated twice during the contract period. The objectives of the current numerical groundwater flow model include: • Conceptual understanding of the regional aquifer based on available data and reports; • Establishment and calibration of a steady –and transient state numerical model representing the aquifer systems at the project site; • Assessment of scenario-based predictions, thus reflecting longer-term abstraction under different stress scenarios; and • The results will guide future abstraction and provide recommendations based on the simulations to optimise the monitoring plan design. To improve model reliability and reduce uncertainties, the following tasks should form part of the broader recalibration of the model: • Refined Spatial Discretisation: Consider reducing the model domain around the wellfields to enable finer mesh resolution, particularly around production and key monitoring boreholes, to better capture local drawdown responses. • Numerical Stability: Investigate and mitigate numerical instabilities to allow shorter model run times. Consider applying the unconfined/confined numerical formulation in FEFLOW.
--	-----	---	--

			- Automated Calibration: Transition from trial-and-error parameter adjustments to automated calibration using PEST to optimise the calibration. - Incorporation of Private Abstraction Data: Include verified datasets from the DWS once it is available to account for registered abstractions in the wider region. - Uncertainty Analysis: Conduct formal uncertainty analysis to quantify model confidence.
4		Develop database	
	4.1	Langebaan Road Aquifer (LRA) Wellfield	4.1.1 Develop a database for Langebaan Road Wellfield (Current database information must also be merged with new database to ensure continuity) Database Objectives: 1. Storage of Field Measurements: The database should be designed to store time-stamped field measurements, including but not limited to manual water level measurements, electrical conductivity measurements, flowmeter readings, and field comments. This will ensure a centralised and organised repository for easy data retrieval and analysis. 2. It should provide tables, charts and a spatial front end for easy visualization and analysis, enabling users to derive insights, identify trends and view spatial patterns with ease.
	4.3	Hopefield Town Boreholes	4.3.1 Develop a database for Hopefield Town Boreholes (Current database information must also be merged with new database to ensure continuity) Database Objectives:

			1. This data integration will provide a holistic view of the groundwater system and its dynamics. 4. User-Friendly Interface: The database should include a user-friendly dashboard or similar application that allows users to view and interact with the data. It should provide tables, charts and a spatial front end for easy visualization and analysis, enabling users to derive insights, identify trends and view spatial patterns with ease.
5		5.1 Investigate Hopefield Wellfield extension options.	5.1.1 Investigate the extension of Hopefield Wellfield, to increase the yield from 4.4ML/day to 10ML/day. This will ensure optimised utilisation of Bulk Water Infrastructure. The investigation should include but not be limited to the following. • Review existing information. • Identify new boreholes positions to increase yield. • Determine if boreholes should be drilled deeper into the Lower Aquifer Unit. • Liaise with DWS regarding requirements for drilling of exploration boreholes.

			• Draft scope of works and determine the cost estimate for drilling of 3 exploration holes. The drilling contractor will also be required to conduct 72-hour yield test. • Evaluate drilling contractor's tender submissions and compile evaluation report. • Oversee contractor during drilling and borehole construction operations. • Compile report with findings and recommendations to reach 10ML/day yield.
6		Ad Hoc Matters	Provision has been made for Ad Hoc matters and recoverable expenses in the Bill of Quantities. e.g., Provision of specialist inputs on development applications that involve utilisation of groundwater or developments that could negatively impact on groundwater and water incident reporting will be conducted as ad hoc matters.

2.3 Data Collection and Field Personnel

Personnel must be able to explain the monitoring and the purpose of aquifer management to an ordinary person. Access to boreholes to be arranged by the successful bidder in collaboration with West Coast District Municipality.

All data collected must be imported into a GIS data base. Current database is (DASH). A database of similar or superior performance must be implemented and updated as part of the project.

2.4 Data Backup and ownership

The Contractor shall backup all data and final products. All data utilised to create and populate the GIS database must be available to SBM for compilation and updating of future GIS data bases to ensure continuity.

2.5 Contract Terms

Target dates for reports as per Water Use license requirements are non-negotiable. After award of tender a project program must be compiled and approved by SBLM. The program will be utilised to measure performance. Please refer to tender data.
