SPECIFICATIONS:

1. EXISTING INFRASTRUCTURE

iThemba LABS utilises an Auditorium/Lecture Hall which is situated in the Administration Building (Block J) of our premises in Faure, Western Cape as depicted below. The room volume measures approximately 700 m³ and air is currently being supplied to the room from an existing Air Handling Unit (AHU) which also supplies a number of other areas in Block J. The AHU is supplied with chilled water from a central facility.

A total of six (6) 250 mm diameter ventilation diffusers are installed in the Auditorium ceiling. The average measured velocity measured at the diffusers is 0.7815 m/s which equates to a total air supply of 0.23 m³/s or 828 m³/h. The approximate Air Changes Per Hour (ACH) in the Auditorium is currently 1.2 which is deemed insufficient for the continued use of the facility.

Two additional work rooms located adjacent to the auditorium, namely J2 and J6 as depicted above are not linked to the current HVAC system nor network of ductwork. The approximate volume of room J2 is 160 m³ and that of J6 is 200 m³.

2. REQUIRED HVAC SPECIFICATIONS

The objective of this RFQ is to enlist the services of professional consulting engineers for the inception, concept and viability, design development and documentation, procurement, contract administration and close-out of all mechanical works, electrical works, civil and structural works required for a new stand-alone HVAC system dedicated to the Auditorium including rooms J2 and J6 in order to achieve the following conditions inside the rooms as per SANS 10400 Part O:

Room	Volume	Air Changes Per Hour (ACH)	Minimum Airflow	Air Temperature	Controllable Air Temperature Range	Relative Humidity
Auditorium	700 m ³	Minimum of 10	0.7 m/s	21° C (± 2°C)	18 – 25 °C	40%-60%
J2	160 m ³	Minimum of 6				
J6	200 m ³	Minimum of 6				

The scope and specifications are intended to cover the requirements and standards to be followed when selecting and specifying equipment and the functional system as a whole. Excluded are the details of design and implementation (civil, mechanical and electrical) which are recognized as being the exclusive responsibility of the service provider.

The air supply to the auditorium should be isolated from the existing Air Handling Unit and diverted to the new HVAC system. The works shall include all modifications required to the existing ducting to supply and extract air to the auditorium and rooms J2 and J6 from the new HVAC system.

Some proposed locations for the new HVAC system are shown in the picture below, to be located on the concrete roof of the adjacent buildings such that noise intrusion into the nearby offices and apartments will be minimised.

Additionally, the design of the new HVAC system shall minimise any negative impact on the acoustics of the auditorium due to the increased airflow and noise generated by plant.

Bidders shall familiarize themselves with the requirements of the site and area where the installation and upgrades shall be implemented including the plans and specifications related to each of these areas. The bidder shall be deemed to have examined conditions of the current HVAC installation and facilities during the compulsory site clarification meeting. No claim will be recognized after submission of a tender on the grounds of a lack of knowledge of the foregoing.

3. SERVICE PROVIDER CAPABILITY AND EXPERIENCE

Bidder

The Bidder to provide details of having successfully completed a minimum of three (5) similar HVAC design and installation projects in the last three (3) years. Preference will be given to bidders who can provide signed certificates of completion (including project schedules) of recent projects, indicating the value, duration and completion date of the contract.

Design Engineer/Technologist

The Mechanical Engineer / Technologist responsible for the design of the HVAC system to be professionally registered with the Engineering Council of South Africa (ECSA) as a Professional Mechanical Engineer (Pr. Eng) or Professional Mechanical Engineering Technologist (Pr. Tech) with a minimum of ten (10) years of design experience of HVAC systems. The Engineer/Technologist to have successfully completed a minimum of three (3) projects of similar scope within the last three (3) years.

Mechanical Draughtsman

The Mechanical Draughtsman to have a minimum of five (3) years of mechanical draughting experience of HVAC systems.

4. SUB-CONTRACTING

If part of the work will be sub-contracted, company profiles of each sub-contractor to be submitted with the proposal.

The successful bidder may not subcontract the whole of the works and must retain overall design responsibility for the mechanical design of the new HVAC system which may not be subcontracted.

5. SPECIFIC CONDITIONS

- 1) Responses received from the prospective service providers do not give rise to any contractual obligation to iThemba LABS.
- 2) iThemba LABS reserves its own right to utilize or not utilize any of the information provided by the prospective service providers.
- 3) iThemba LABS reserves the right to request further information should they deem necessary to do so.
- 4) iThemba LABS may decide to call presentations to interrogate the proposals submitted by any prospective service providers.
