CERTIFICATE OF INDEPENDENT BID DETERMINATION

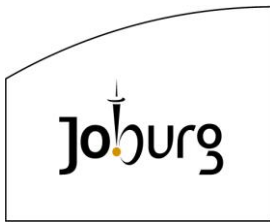

1. This Municipal Bidding Document (MBD) must form part of all bids³ invited.
2. Section 4 (1) (b) (iii) of the Competition Act No. 89 of 1998, as amended, prohibits an agreement between, or concerted practice by, firms, or a decision by an association of firms, if it is between parties in a horizontal relationship and if it involves collusive bidding (or bid rigging).⁴ Collusive bidding is a *pe se* prohibition meaning that it cannot be justified under any grounds.
3. Municipal Supply Regulation 38 (1) prescribes that a supply chain management policy must provide measures for the combating of abuse of the supply chain management system, and must enable the accounting officer, among others, to:
 - a. take all reasonable steps to prevent such abuse;
 - b. reject the bid of any bidder if that bidder or any of its directors has abused the supply chain management system of the municipality or municipal entity or has committed any improper conduct in relation to such system; and
 - c. cancel a contract awarded to a person if the person committed any corrupt or fraudulent act during the bidding process or the execution of the contract.
4. This MBD serves as a certificate of declaration that would be used by institutions to ensure that, when bids are considered, reasonable steps are taken to prevent any form of bid-rigging.

³ Includes price quotations, advertised competitive bids, limited bids and BIDs.

⁴ Bid rigging (or collusive bidding) occurs when businesses, that would otherwise be expected to compete, secretly conspire to raise prices or lower the quality of goods and / or services for purchasers who wish to acquire goods and / or services through a bidding process. Bid rigging is, therefore, an agreement between competitors not to compete.

CITY OF JOHANNESBURG

ENVIRONMENT AND INFRASTRUCTURE SERVICES DEPARTMENT

REQUEST FOR PROPOSALS

JULY 2022

REVIEW OF THE CURRENT WATER QUALITY MONITORING PROGRAMME

1. BACKGROUND

Environmental monitoring is vital in determining baseline conditions from where to manage, measuring the effectiveness of management controls, and determining the compliance of a system to objectives, guidelines, or legislative conditions as set out in the National Water Act, 1998 (Act No. 36 of 1998). All these elements are essential in minimizing the environmental liability of mines, industries, developers, local authorities, etc. Measurement is as with any management system, a key ingredient to the process.

The current water quality monitoring programme was last reviewed in 2009 and was inherited from the Department of Water Affairs (DWA) national chemical monitoring programme which was designed in the 1970s. Over time, there have been changes where some sampling points have been dropped and others added for various reasons. The current monitoring programme was also based on old municipal boundaries and development patterns. These have changed considerably, and the city has grown, with the result that not only is there more pressure on the city's rivers, but several tributaries are not covered by sampling points particularly those within newly developed areas. There is a need for the monitoring programme to be extended to include watercourses across the full extent of the City. Therefore, there is a need to review both the coverage of the City's surface water quality monitoring programme, as well as to ensure that it remains scientifically valid, cost effective and practically implementable.

Currently, the City monitors 130 sites monthly for chemical and bacteriological analysis and recording of aesthetics across the 7 Regions. Monitoring is carried out at strategic points throughout the City and includes: up and downstream of river confluences, up and downstream of known and continuous point source discharges, downstream of informal settlements to measure the impact of the settlement, up and downstream of developments, particularly in ecologically sensitive areas, up and downstream of industrial areas/mining activities as well as at City borders to monitor water received from neighboring local authorities and water leaving the City.

2. OBJECTIVE

The purpose of the contract is to appoint a service provider to effectively review the current water quality monitoring programme in the City for the Jukskei and Klip River Catchments for the period of 24 months (2 years).

3. SCOPE OF WORK

- 3.1. To effectively review the existing surface water monitoring programme all existing information will need to be collated into a central system. This information will include sampling coordinates, sampling sheets, water quality information, hydrological information, geographical information, position of discharge points as well as land-use information. This should be able to be integrated with the City's GIS system.
- 3.2. Review the current coverage of the programme in relation to the growth/expansion of the COJ.
- 3.3. The review must involve a fieldwork component to investigate the existing sampling localities, pollution sources as well as sampling methodologies of field personnel.
- 3.4. Based on the pollution types and sources impacting on COJ surface water resources, evaluate and make recommendations concerning the appropriate parameters which the programme should be measuring.
- 3.5. Develop and propose a revised water quality monitoring programme which meets acceptable criteria for a scientifically valid and credible water quality monitoring programme.
- 3.6. Evaluate and make recommendations concerning the training, capacity building of water sampling personnel.
- 3.7. Inter alia, the following aspects should be addressed:
 - 3.7.1. Accessibility of sampling localities.
 - 3.7.2. Safety situation for field personnel.
 - 3.7.3. Sampling techniques, sampling preservation, transport, chain of custody etc.
 - 3.7.4. Analysis of the changes in land use activities and their impacts on the current and future sampling points (including parameters).
 - 3.7.5. Monitoring frequency (optimal and minimum with acceptable confidence level).
 - 3.7.6. Parameters analysed (is the parameters analysed sufficient to characterize the impact and the possible effects thereof).
 - 3.7.7. Review and make recommendations concerning the content and applicability of the field data sheet.
