21.6 Upon any delay beyond the delivery period in the case of a supplies contract, the purchaser shall, without canceling the contract, be entitled to purchase supplies of a similar quality and up to the same quantity in substitution of the goods not supplied in conformity with the contract and to return any goods delivered later at the supplier's expense and risk, or to cancel the contract and buy such goods as may be required to complete the contract and without prejudice to his other rights, be entitled to claim damages from the supplier.

1 DESCRIPTION

This Bid calls for radar training and upgrading of existing TITAN software to LROSE at Nine (9) different radar sites and one TITAN server at the head office. A maximum of twenty (20) trainees for Irene site and six (6) trainees per site for other Nine (9) regional sites.

2 INTRODUCTION

The South African Weather Service (SAWS) is a public entity of the Department of Forestry, Fisheries and the Environment (DFFE) and derives its mandate from the South African Weather Service Act (No 8 of 2001 as amended). The public entity is listed as a Schedule 3A Public Entity in terms of the Public Finance Management Act (PFMA).

SAWS is tasked with providing timely and accurate scientific data in the field of meteorology to the broader South African society: a combination of both public good and commercial services. The organisation plays a vital role in South African public life, not just as a provider of key services, but also in empowering citizens to adapt the effects of the ever-changing weather.

3 BACKGROUND

Severe Weather Warnings are issued to protect life and property, as severe weather conditions can endanger the safety of the public and infrastructure. For this purpose, SAWS utilise real-time observational infrastructure such as weather radar, satellite images, lightning data as well as model output from short range numerical weather prediction models. These are used by highly skilled weather forecasters to formulate and deliver relevant warnings.

A weather radar remains the most important tool for monitoring and nowcasting thunderstorms. Tracking algorithms are often applied to radar data which not only provides the current location polygons of a storms, but also forecasted locations of storms in the next hour.

The upgrade of the old TITAN software to LROSE or equivalent will enhance SAWS capability in storm tracking and weather prediction. TITAN was originally designed as an algorithm to objectively identify and track thunderstorms, as measured by digital weather radar, for the purpose of evaluating weather modification activities. LROSE is a derivation of the older TITAN distribution.

4 REQUIREMENT / SCOPE OF WORK

Training programs helps employees update their knowledge and skills and provides them with a clear picture of their strengths and weaknesses. From an organizational perspective, it also minimizes weak points and saves business time and money by avoiding repeat mistakes. The upgrade of the existing Titan software to LROSE will ensure better performance and efficiency, reducing chances of failure.

4.1 This Bid calls for interested bidders to provide services in the following areas:

4.1.1 Software upgrade (TITAN to LROSE or equivalent) and training (Forecasters, Engineers, Researchers, and ICT).

The onsite training should cover the following areas:

4.1.1.1 Weather Radar Interpretation and Weather Radar Applications

4.1.1.2 Basic Weather Radar Principles

4.1.1.3 Weather Radar Products and Applications

4.1.1.4 Weather Radar applications algorithms

4.1.1.5 Any other related or relevant application

4.1.1.6 Additional general Weather Radar areas of application

4.1.1.6.1 Radar Infrastructure and integration with other observing networks

4.1.1.6.2 Applications to Early Warning Systems

4.1.1.6.3 Forecasting for Early Warning Systems

4.1.1.6.4 Coupled Hydrometeorology forecasting e.g., nowcasts and hydrology.

4.1.1.6.5 Clutter removal algorithms

4.1.2 Software Upgrade (TITAN) for nine (9) S-band radars and Training (Forecasters, Engineers, Researchers, and ICT).

4.1.2.1 Software upgrades should be added to existing SAWS infrastructure, software and displays of radar data and should be based on the latest LROSE system.

4.1.2.2 The software upgrade should build on the current SAWS systems. All existing processes to be transferred to LROSE.
