## 1. Background

The National Student Financial Aid Scheme (NSFAS) is a schedule 3A public services entity operating under the stewardship of the Department of Higher Education, Science and Innovation. The mandate of the NSFAS is to provide financial aid to all eligible public universities and Technical and Vocational Education and Training (TVET) college students from poor and working-class families in line with the NSFAS Act (Act No. 56 of 1999).

The NSFAS IT network infrastructure includes hardware, appliances and technologies that provide communications to all the Production, Development and Training environments across 170 servers that platform all front end, business application and IT support services. To ensure service availability NSFAS will be moving certain services to public cloud hosting platforms.

As NSFAS is striving to enhance operational efficiency and service delivery, a managed multicloud strategy has emerged as a compelling solution. With the increasing reliance on cloud computing, managing multiple cloud environments from different providers poses challenges in terms of complexity, inefficiencies, and security risks. By adopting a managed multicloud approach, NSFAS can leverage the strengths of various cloud platforms, such as Microsoft Azure, Huawei, Amazon Web Services (AWS), and Google Cloud, while entrusting the management to a dedicated service provider. This strategy ensures optimal resource allocation, high availability, and streamlined operations. This enables NSFAS to focus on their core business objectives, deliver enhanced services to its stakeholders and stay at the forefront of operational efficiency in today's dynamic and competitive digital landscape while mitigating risks associated with a single cloud provider and lack of skills.

Furthermore, efficient cost management practices can be implemented by leveraging different pricing models and taking advantage of cost-saving opportunities across various cloud platforms. Partnering with a managed service provider specializing in multicloud environments provides NSFAS with expert guidance, 24/7 monitoring and support, proactive security measures, and automated management.

NSFAS is currently seeking a Managed Multi-Cloud Hosting Provider that can offer a comprehensive range of services across various cloud platforms, including but not limited to the following:

- Provisioning, setup, and management of infrastructure across multiple cloud platforms, such as AWS, Azure, Google Cloud, Huawei etc. This includes managing instances, databases, load balancers, security groups, and other relevant components.

- Handling the underlying operating systems and ensuring timely implementation of security updates and patches.
- Establishing and managing data backup and disaster recovery solutions across the multi-cloud environment.
- Implementing robust monitoring systems and alerts to ensure continuous system availability and reliability.
- Conducting performance tuning and optimization activities to maximize system performance across the multi-cloud infrastructure.
- Implementing and managing security best practices, including the configuration of firewalls, access control mechanisms, and other essential security measures.
- Proactively managing costs associated with the multi-cloud infrastructure and providing recommendations for cost optimization.

## 2. Purpose

The purpose of this request for proposal (RFP) is to invite suitable information technology service providers to submit proposals for the procurement of managed public multicloud platform services and support services on an ad-hoc basis. The organization seeks to establish a partnership with a service provider for a period of 12 months to ensure efficient management and utilization of their multicloud infrastructure.
