DETAILED TECHNICAL SPECIFICATION

1. COMPANY OVERVIEW

South African Broadcasting Corporation (SABC) is a Public Entity founded in August 1936 and listed in terms of Schedule 2 of the Public Finance Management Act, Act No. 1 of 1999, as a public broadcaster in South Africa, and provides 19 radio stations as well as five television broadcasts to the general public.

2. BACKGROUND

At Radio Park there are three plate type heat exchangers, on the secondary chilled water loop, that supply the chilled water to the cooling coil of the air-handling unit. The air-handling unit cools the air that is then supplied to the building to cool workspaces. The chilled water leaving the heat exchanger to the cooling coil of the air-handling unit should be about 6 °C. If the heat exchanger plates are dirty, the strainers are also dirty there will not be a proper heat transfer hence the water going to the coils will not be cold enough as a result the air going to the building through air ducting will not be chilled enough. Therefore, the thermal comfort in the building will decrease and the broadcasting equipment will overheat and crash resulting to broadcasting blackout.

Since these three heat exchangers were installed, in 2014, they have not been cleaned nor strainers replaced. The heat exchanger plates and strainers are bound to be dirty and clogged by now. This is starting to affect the heat transfer, because the supply and return temperatures are now high. We had to start the second main water-cooled chiller today because the one was not coping with the load. This could mean that the chilled water flow is restricted because the strainers are blocked. We do not have the skillset internally to do the work. The work is risky because when the heat exchanger is boxed up, it must be boxed up properly. The plates must follow the correct sequence otherwise the water flow would be disturbed, the clip-on rubber linings must be fitted correctly otherwise the heat exchanger would leak, then the heat exchanger must be pressure tested thereafter using pressure testing pump to ensure that it is leak free.

3. REQUIREMENTS

- a) Open the heat exchanger, high pressure-wash the plates
- b) replace the clip-on rubber linings
- c) Box it up
- d) clean or replace the worn strainers
- e) Pressure-test the heat exchanger
- f) provide a service report
- g) Service provider must provide their own high-pressure cleaner for washing the plates, clip-on rubber linings and other consumables that might be required for the service.

4. HEAT EXCHANGERS INFORMATION

- a) Name: ThermoLine PTL-0850KCKL-1750 – Elgin Cooling System

- 5 In order to give effect to the above, the attached Certificate of Bid Determination (SBD 9) must be completed and submitted with the bid:

¹ Includes price quotations, advertised competitive bids, limited bids and proposals.

² Bid rigging (or collusive bidding) occurs when businesses, that would otherwise be expected to compete, secretly conspire to raise prices or lower the quality of goods and / or services for purchasers who wish to acquire goods and / or services through a bidding process. Bid rigging is, therefore, an agreement between competitors not to compete.
