

Specifications for pH/EC meter combo

The growth facility at BTP's pH meter is currently not functioning, nor does BTP have an electron conductivity (EC) meter that could be used for determining dissolved fertiliser in the fertigation tanks required for projects run within the unit. The VIMP hydroponic unit has indicated previously that they've found that the Hanna instrument pH/EC meter combo – which are sold by various distributors in SA –last longer and are more robust for fertiliser tank usage. Their unit only uses this brand now since there are a number of poor quality devices on the market that does not last.

Specifications

Hanna Instruments HI 98129 – as per image
pH and EC meter waterproof combo, with $\pm 0.05\text{pH}$ Accuracy, 0.01pH Resolution, 14pH Max, $+60\text{ }^{\circ}\text{C}$ Max.
