1. THE PROJECT BACKGROUND AND GOALS

1. a. Project Background

The Strategy Management (SM) Chief Directorate within the Gauteng Provincial Treasury oversees Monitoring and Evaluation (M&E) activities to ensure effective program implementation and accountability. Each program is required to submit Annual Performance Plans at the beginning of each financial year, outlining specific targets and timelines. Subsequently, programs must report their performance quarterly, accompanied by supporting documentation to validate the work completed. This structured approach is designed to foster transparency and enable data-driven decision-making.

The monitoring and reporting system should be a fully web-based reporting portal, accessible from any internet-enabled device, allowing users to interact with the system conveniently. It should include an integrated Business Intelligence (BI) platform that facilitates the generation of consolidated reports in real-time. The monitoring and reporting system should be able to integrate with SAP Business Objects, enabling the production of a variety of report formats, including tabular reports, graphical visualisations, and automated Microsoft Word documents, all designed to support informed decision-making and enhance stakeholder engagement. The procurement of the reporting system must encompass not only the supply of the reporting system but also its ongoing upgrades and maintenance. The system is also required to incorporate a data analysis module that will be used to develop a Dashboard for extra analysis of information outside of the automated data capturing and input processing.

By leveraging the capabilities of a monitoring and reporting system, GPT aims to improve its capacity for real-time performance tracking, ensure compliance with regulatory requirements, and ultimately enhance the delivery of services to its stakeholders.

1. b. Goals

The project aims to implement the monitoring and reporting system into a fully web-based reporting portal accessible from any internet-enabled device. Key goals include ensuring a user-friendly design and achieving full operational capability within three months to ensure continuity of automated reporting. The system must also maintain compatibility with existing tools, such as SAP Business Objects, facilitating cohesive data analysis.

The expected outcomes of this solution include improved reporting efficiency, enhanced accountability among programmes, and real-time access to performance data, fostering transparency. A training component will also be included to equip users with the skills necessary to effectively utilize the new features of the Monitoring and Evaluation Reporting System.

The system is also required to incorporate a data analysis module that will be used to develop a Dashboard for extra analysis of information outside of the automated data capturing and input processing.

3. REQUIREMENTS FOR MONITORING AND EVALUATION REPORTING SYSTEM SOLUTION

The procurement of the monitoring and reporting system aims to improve reporting accuracy, creating a more efficient and user-friendly system that supports GPT's monitoring and evaluation objectives while bolstering overall accountability and performance management.

Key requirements include:

- Reporting must align with the Standardised Oversight and Reporting (SOAR) template to ensure consistency with established guidelines.
- At the beginning of each performance management period or financial year, the system should allow for the breakdown of annual targets into quarterly targets, with features to specify reporting frequency and whether indicators are cumulative.
- The system must facilitate performance tracking at both the departmental and sub-directorate levels, enabling users to aggregate achievements and drill down into detailed metrics.
- At financial year-end, the system should provide functionality to annualise performance for both cumulative and non-cumulative indicators, enabling accurate performance evaluations and average calculations.
- The system should monitor the performance of all key departmental projects, ensuring comprehensive oversight.
- Users should be able to extract and generate reports in specific formats (e.g., PDF, Excel, Word) to meet statutory and legislative reporting requirements.
- Robust data entry checks must be implemented to validate inputs and ensure completeness every quarter.
- Relevant alerts and error messages should notify designated controllers of any discrepancies.
- The tool must enable comparisons of quarterly performance against annual targets, facilitating performance assessment, including comparisons of annual performance over time.
- The system should enforce data quality validation measures, ensuring completeness across all required fields, including follow-ups and submission deadlines.
- Calculations must include both positive and negative deviations, with mandatory comments required from approving managers for clarity on performance.
- Quarterly reporting for GEYODI should be developed and enabled.
- A functional dashboard must facilitate easy navigation among the various tabs of the system.
- Users should have the ability to drill down into critical data points for deeper analysis.
- The system must allow for sign-off and closure of quarterly data entries.

- The system should support composite indicators, enabling aggregation of data elements associated with these indicators.
- Each quarter should include a high-level summary highlighting significant issues within all submitted figures.
- The system should incorporate relevant security features, with provisions for regular updates as necessary.
- The appointed bidder/s will be responsible for integrating the monitoring and reporting system with the adhoc performance dashboard for streamlined access.
