7. SCOPE OF SERVICE: ONE (1) CHANNEL TO CHANNEL INPUT ISOLATION WITH 100 CHANNELS TEMPERATURE RECORDER WITH ISOLATON CARDS.

BACKGROUND

The Temperature recorders are used to measure temperatures during temperature rise tests with channel-to-channel input electrical isolation as defined in the below standards:

The following standards are some of the applicable specifications:

SANS / IEC 61439 series of standards

SANS / IEC 60947 series of standards

SANS 780

SANS 10142

SANS 62271 series of standards

The main feature of the temperature recorder is the channel-to-channel input isolation of at least 50V used during testing. Our experience has shown that Temperature recorders get damaged overtime and at a faster rate if exposed to our temperature rise plant test voltages and currents if they do not have channel to channel input electrical isolation. We therefore seek to have a Temperature recorder that is well isolated electrically, between each channel and use temperature probes that are isolated from source voltages and with smallest sensing tip or sensing profile.

REQUIREMENTS:

Provide set of specific requirements to be satisfied by the material, design, product, or service to be procured for this project:
