

Dear Service Provider,

Please note we do not have the quantity of each. But the service provider once appointed will be able to extract that information from the Ziton panels

The HSRC Building is one building- two tower blocks separated by a walkway on each floor. One tower block is from the 2nd floor to the 9th floor on the Southern side.

Then there is the Northern tower block which has 15 floors. 14 floors are office space and the 15th is the service area housing the lift machinery.

Then there is basement A, B and C parking areas and basement D which houses the parking lifts..

The ground floor has the library, conference facilities and the reception areas. All these areas have the below systems:

Ziton Panels	1x Server room (ground floor Library) 1x Transformer room (Basement C parking) 3 x Control room (Ground floor reception area) 1x LT Room (Basement B Parking area)
Emergency Call points	Various locations in and around the building
Sounders	Various locations in and around the building
Fire Extinguishers	All areas (floors including all basement parking and lift houses)
Smoke detectors	All floors-corridors including basement parking areas
Fire Hose Reels	All floors- corridors
Fire Hydrants	All over the building
Gas suppression systems	2x Server room (ground floor Library) 2x Transformer room (Basement C parking) 2x LT Room (Basement B Parking area) 1x UPS room (Basement B parking area)
Public Address system	Speakers mounted in all corridors and
