SCOPE OF WORK

INTRODUCTION TO THE NRF

The National Research Foundation Act, Act 23 of 1998, establishes the National Research Foundation ("NRF") as the juristic person that makes this bid invitation and will contract with the awarded bidder. The Public Finance Management Act classifies the organisation as a Schedule 3A Public Entity.

CONTEXT OF THIS PROCUREMENT

SAEON currently operates seven nodes and two Research Infrastructures that are strategically situated across geographic regions representing the country's major biomes. SAEON coordinates an array of multi-disciplinary observation platforms, and research programs that are designed to monitor and understand Earth system dynamics and human-induced changes to these over multiple scales.

These initiatives are currently being advanced through the development of a coordinated instrument network that must contribute quality, long-term environmental data for research that will ultimately guide evidence-based policy and decision-making. SAEON is committed to scientific excellence and data emanating from these arrays needs to be of high quality and reliable enough to support long term monitoring of ecosystem changes, scientific publications, and academic use and comparable with data emanating from comparable national and international networks.

The Expanded Freshwater and Terrestrial Environmental Observation Network (EFTEON) research infrastructure seeks to install a number of continuous monitoring instruments in each of the six identified EFTEON landscapes (Figure 1). One of the key areas of importance for EFTEON is the development of a network of atmospheric, biogeochemistry, soil and vegetation sampling sites at each of the EFTEON landscapes. The soil assessments at the landscapes includes measurements of soil physical, chemical and biological properties to assess the performance of the soils in the landscapes in the delivery of ecosystem services.

EFTEON Final Selection Landscapes
