**REQUEST FOR QUOTATION PERFORMANCE APPRAISAL – OLIFANTSPOORT EBENEZER
UPGRADE OF OLIFANTSPOORT AND EBENEZER REFUBISHMENT PHASE 1A**

1. PURPOSE

The purpose of this specification is to request Supply Chain Management Unit to procure the Service Provider to conduct performance appraisal on professional services rendered the Olifantspoort-Ebenezer phase 1A: Olifantspoort and Ebenezer Water Supply Scheme Refurbishment.

PROJECT BACKGROUND

The Olifantspoort Water Scheme and the Ebenezer Water Scheme are the two main sources of potable bulk water for Polokwane City and areas that are located within the vicinity of the bulk transmission pipelines from each treatment works towards Polokwane City.

Since commissioning in the early 1970s, none of the two schemes has undergone major refurbishment or upgrading works and most components do not have sufficient capacity to meet the current and projected future water needs. Most components of the potable bulk water supply infrastructure are in a poor state of repair, which leads to frequent breakdowns.

Due to the potable bulk water supply infrastructure capacity and non-reliability of potable bulk water supply to Polokwane City, Polokwane Local Municipality declared a moratorium on new property development within the Polokwane City in May 2013.

In July 2015, Lepelle Northern Water (LNW) commissioned a project for the upgrading of the Olifantspoort and Ebenezer Water Schemes.

On 30 September 2015, the then Department of Water and Sanitation issued a ministerial directive to LNW, which directed LNW to develop strategic interventions that will address the potable bulk water supply challenges within Polokwane City and its immediate surrounds.

The Olifantspoort Water Scheme currently supplies, on average, 60Mℓ/d to six regional water schemes, including the Polokwane Local Municipality. Raw water released from Flag Boshielo is abstracted from the Olifantspoort Weir and conveyed to the Olifantspoort Water Treatment Works for treatment.

Olifantspoort Water Treatment Works comprise of two treatment modules, each with a treatment capacity of 30Mℓ/d and a 10Mℓ/d packaged treatment plant, totalling 70Mℓ/d treatment capacity.
