1. PURPOSE

- 1.1. To appoint a service provider to design and implement an expanded Industrial Symbiosis Initiative (ISI) involving trade in waste for implementation over twelve (12) months in Region B: Free State, KwaZulu-Natal, and Mpumalanga provinces.

2. INTRODUCTION AND BACKGROUND

- 2.1 The Department of Forestry, Fisheries and the Environment (DFFE) has partnered with the National Cleaner Production Centre (NCPC-SA) to implement an Industrial Symbiosis Initiative (ISI) programme. Industrial Symbiosis is defined as form of brokering to bring companies together, finding ways to use the waste from one company as raw material for another company, while reducing the amount of waste that would normally be disposed at the landfills.
- 2.2 The National Waste Management Strategy 2020 (NWMS), developed by the DFFE, identified the NCPC-SA as the lead Implementing Institution for rolling out industrial symbiosis across the country. The programme is primarily aimed at empowering businesses owned by women, youth, and people living with disabilities, but not restricted to these groups. The DFFE, in collaboration with the NCPC-SA, has designed the programme to have three (3) Regions made up of Region A (Northern Cape, Western Cape, and Eastern Cape), Region B (Free State, KwaZulu-Natal and Mpumalanga), and Region C (Gauteng, North-West, and Limpopo).
- 2.3 The Industrial Symbiosis programme was initiated end of 2022, with service providers contracted for a period of 12 months for each region, and these contracts were further extended for 9 months for Region A and Region C. The Region B contract expired before the work was finalised.
- 2.4 The outputs delivered from the previous contract in Region B included 30 signed synergy contracts, 30 company assessment reports, case studies from the established synergies, training, and three databases of stakeholders and companies involved in waste brokering from the three provinces for Region B.
- 2.5 The new tender should deliver the remaining thirty (30) signed synergies, thirty (30) company assessment reports, case studies, training, and three (3) databases. Bidders should thoroughly review and understand the expectations outlined in the Scope of Work and Deliverables as set out in these Terms of Reference. In-depth information should be provided in the proposals on how the bidders will secure and provide training and technical support to business entities that are owned by women, youth, and people living with disabilities. This is to encourage gender mainstreaming and to address the marginalised entities that also have economic potential within the waste sector.

- 2.6 The timeframe for implementation is set for twelve (12) months. The required reports and supporting documents, including the close-out report, must be submitted within twelve (12) months.

3. OBJECTIVES

The objective is to appoint a suitably qualified service provider for the following:

- 3.1 Conduct evidence-based research, design and implement an expanded Industrial Symbiosis Initiative (ISI) programme involving trade in waste for Region B: Free State, KwaZulu-Natal, and Mpumalanga.
- 3.2 Conduct material flow analysis for symbiotic partner industrial process (company assessments).
- 3.3 Facilitate matchmaking between companies within the waste value chain.
- 3.4 Conduct training and technical support to participating companies.
- 3.5 Develop case studies and lessons learned from the synergies.
- 3.6 Finalise 30 synergies with signed agreements.
- 3.7 Maintain a database of participating partners and stakeholders involved in waste management and recycling within the three provinces.

4. SCOPE AND EXTENT OF WORK

- 4.1. The following is expected from the Service Provider:

4.1.1 INCEPTION PHASE

The service provider will attend an inception meeting to project's goals and expectations. The service provider is expected to present a project inception report with the components listed below.

4.1.1.1 Project Inception Report

Provide an overarching process/methodology, deliverables, and timeframes, including the identification of challenges, risks, and mitigation measures across the three provinces. An inception report must be submitted as a deliverable.

4.2. IMPLEMENTATION PHASE

- 4.2.1. During this phase, the service provider is expected to first evaluate feasibility, then identify and analyse project stakeholders, and next develop an implementation plan—

a roadmap for how the project will be executed. These steps lay the foundation for effective implementation. This will be followed by project execution as outlined below.

4.2.2 Feasibility Report, Stakeholder Report, and Implementation Plan

- 4.2.2.1. Conduct a feasibility study and engage key industry stakeholders involved in the waste value chain in the Free State, KwaZulu-Natal, and Mpumalanga. This feasibility study should identify key companies to participate in the project, challenges, and risks, as well as how these risks will be mitigated.
- 4.2.2.2. The feasibility study should also identify sectors that will be targeted within the three provinces; the projected amount of waste to be diverted from landfill through those synergies; the projected number of women, youth, and people living with disabilities owned businesses to be targeted and trained (the initiative is targeting these groups but not exclusively). The Feasibility Study must clearly outline how these groups will be targeted and included in the project. The feasibility report must be submitted as a deliverable.
- 4.2.2.3. An Implementation Plan highlighting how and when the 30 synergies will be targeted across the three provinces. Report to be submitted as a deliverable.
- 4.2.2.4. A Stakeholder Engagement process should be conducted to identify stakeholders involved with or already participating in waste management and waste brokering, and a synopsis and analysis of the stakeholder engagement conducted should be reported. A Stakeholder Engagement report must be submitted as a deliverable.

4.2.3. Company Assessments Report

- 4.2.3.1. Conduct company site visits and technical assessments to determine/get a factual account of (but not limited to) the company's resources and waste for CO2 emissions, landfill costs, use of virgin resources, industrial water usage, hazardous waste, pollution, and transport costs.
- 4.2.3.2. Outline in each company assessment report how each company was assisted to increase their sales and profits, tap into new businesses/markets, create jobs, utilize assets more efficiently, become innovative, and create inward investment from their savings/profits, as well as the development or documentation of case studies and success stories. Special focus should be on (but not limited to) women, youth, and people living with disabilities-owned businesses.

4.2.3.3. Technical Assessments Reports compiled for thirty (30) companies. A total of 30 (thirty) Company Technical Assessment Reports for the synergies must be submitted as deliverables.

4.2.4. Training and technical support to IS partnerships

4.2.4.1. Provide training and technical support to IS partnerships with a special focus on - but not limited to women, youth, and people living with disabilities-owned businesses. There should be a minimum of at least 22 (twenty-two) entities trained and provided with technical support by the end of the project.

4.2.4.2. The training must focus on, but not be limited to, Industrial Symbiosis (IS) and Resource Management, Circular/Green Economy, and Sustainable Waste Management topics.
