(Q65-2025-26)

1. INTRODUCTION AND PURPOSE OF LABORATORY WATER PURIFICATION SYSTEM

INTRODUCTION

A **Laboratory Water Purification System** is an essential component in scientific, medical, pharmaceutical, and industrial laboratories, providing water of consistent and reliable purity to meet the specific demands of various analytical, diagnostic, and research applications. The quality of water used in laboratory processes can significantly impact the accuracy, reliability, and reproducibility of experimental results.

Water in its natural state contains a wide range of impurities, including inorganic ions, organic compounds, microorganisms, particulates, and dissolved gases, which can interfere with sensitive laboratory procedures. Laboratory water purification systems are designed to remove these impurities through various treatment stages to produce water of different quality grades, as defined by international standards such as American Society for Testing and Materials (ASTM), International Organization for Standardization (ISO), and Clinical and Laboratory Standards Institute (CLSI).

These systems commonly utilize a combination of purification technologies such as:

- **Pre-filtration**
- **Reverse Osmosis (RO)**
- **Deionization (DI)**
- **Ultraviolet (UV) irradiation**
- **Ultrafiltration**
- **Final filtration**

Each purification step targets specific contaminants, ensuring the final water quality meets the requirements for applications ranging from basic washing and rinsing to highly sensitive analytical techniques like High-Performance Liquid Chromatography (HPLC), Inductively Coupled Plasma Mass Spectrometry (ICP-MS), and cell culture work.

The selection of a suitable laboratory water purification system depends on factors such as:

- The type of applications performed in the laboratory
- Required water quality levels (Type I, Type II)
- Daily water consumption volumes
- Compliance with regulatory and quality standards

By delivering high-purity water on demand, these systems help laboratories maintain consistent experimental conditions, extend the lifespan of analytical instruments, and ensure the validity of results, thereby supporting operational efficiency and scientific integrity.

PURPOSE

A **Laboratory Water Purification System** is designed to produce high-quality, purified water that meets the specific purity requirements for various laboratory applications. In scientific, analytical, clinical, and research laboratories, the quality of water used can significantly impact the accuracy, reliability, and validity of experimental results. These systems remove impurities such as particulates, organic and inorganic contaminants, microorganisms, and dissolved gases.

Key Purposes:

1. **Ensure Water Quality for Sensitive Analyses:**
To provide water of consistent and controlled purity levels (Type I, II, or III), minimizing interferences in chemical and biological experiments, assays, and instrument performance.
2. **Protect Laboratory Equipment:**
To prevent damage, fouling, or malfunctioning of sensitive analytical instruments like HPLC, GC, ICP-OES, AAS, and clinical analyzers due to impurities in feed water.
3. **Improve Accuracy and Reproducibility:**
To ensure reliable and reproducible test results by eliminating contaminants that could interfere with analytical procedures.
4. **Support a Range of Applications:**
To supply water suitable for various laboratory uses — from general washing and reagent preparation (Type III water) to highly purified water for cell culture, molecular biology, and trace analysis (Type I ultrapure water).
5. **Compliance with Standards:**
To meet international water quality standards such as ASTM, ISO 3696 Water for analytical laboratory use, CLSI, and College of American Pathologists (CAP) for laboratory water purity specifications.

2. BACKGROUND

Provide the background detail of the bid, i.e.:

- City of Tshwane is operating two laboratories, one in Rietvlei and the other one in Daspoort. Both Laboratories uses ultrapure water to run their experiments.
- The aim is to get water that is acceptable in the laboratory environment in order to produce results that are accurate.
- This project will be at both Laboratories of Rietvlei and Daspoort.
- No stakeholder will be involved in this project.
- No permissions required
- This is the project for Scientific Services and therefore it will directly benefit the section.
- Only approved service providers will be appointed and deliver the system that is able to produce Type I and II water.
- Other

3. PROJECT SCOPE

The Laboratory Water Purification System shall comply with the following:

1. Two-stage Reverse Osmosis (RO) module and Electrochemical Deionization (EDI)
2. Two pre guard cartridges, one is filled with high quality coconut shell activated carbon removes residual chlorine, macromolecular organics, colloids, heavy metal ions, etc. effectively. Another is filled with appropriate amount of silicon phosphorus crystal, effectively reduces the hardness of feed water; wire wound filter element can intercept powder and floc impurities. Protect RO membrane and EDI module.
3. Adopt Two-stage reverse osmosis design, real-time monitoring of retention rate, reverse osmosis membrane retention rate of $\geq 99.5\%$ in the state of non-destructive; the second stage of reverse osmosis all the wastewater reflux, water conservation, and prolong the service life of consumables.
4. With RO/EDI wake-up mode, 24 hours of pure water part of no water production, the system automatically wake up, produced water 20min automatically drain off, to ensure the performance of RO and EDI.
5. Standard 265nm UVC LED (Ultraviolet C Light-Emitting Diode) bactericidal Ultraviolet (UV) lamp:
 - Control the stability of microorganisms in the water production system of pure water equipment and control the microbial content below 0.01CFU/mL; control the microbial content of pure water inside the pure water tank below 1CFU/mL.
 - ✓ Reduce the use of traditional germicidal mercury lamps, reduce the cost of mercury treatment and the possibility of environmental pollution.
6. Water tank level is monitored by pressure level sensor, the level display is accurate, stable and durable; the water tank storage capacity can be adjusted online, the adjustment range is 10%-100%, to adapt to different water needs.
7. Must have built in ultra purification cartridge filled with electronic grade ion exchange resin can control the ions in water at ultra trace level.

Advanced vertical flow purification method is adopted to ensure the service life and purification effect of purification cartridge.

8. Provision of auto recirculation of water in every hour to maintain the purity of the water
9. The system must display water resistivity/conductivity, Total Organic Carbon (TOC) data, total dispensed water, count down for next recommended consumable replacement, alert management with follow up functions.
10. System should have Universal Serial Bus (USB) access to download the data. Built in Wifi module.
11. Built-in TOC detector with an independent oxidation tank, which is connected in parallel to the closed oxidation system. The detection range is 0.01-999.99ppb, and the accuracy is not less than 0.01ppb; a calibration certificate is required; it meets the United States Pharmacopeia (USP) adaptability test.
12. Output water from the unit should be type-1 grade water with following technical specifications
 - ✓ Resistivity : >18.2MΩ.cm
 - ✓ Bacteria level: < 0.01 colony-forming units per milliliter (cfu/ml)
 - ✓ Endotoxins: <0.001 Endotoxin Units per millilitre (EU/ml)
 - ✓ TOC : < 2 ppb
 - ✓ Flow rate = Maximum 2L/min, stepless control of flow rate
13. Water tank capacity is 100L polyethylene and it is not consumable

CERTIFICATE OF INDEPENDENT BID DETERMINATION

- 1 This Municipal Bidding Document (MBD) must form part of all bids¹ invited.
- 2 Section 4 (1) (b) (iii) of the Competition Act No. 89 of 1998, as amended, prohibits an agreement between, or concerted practice by, firms, or a decision by an association of firms, if it is between parties in a horizontal relationship and if it involves collusive bidding (or bid rigging).² Collusive bidding is a *pe se* prohibition meaning that it cannot be justified under any grounds.
- 3 Municipal Supply Regulation 38 (1) prescribes that a supply chain management policy must provide measures for the combating of abuse of the supply chain management system, and must enable the accounting officer, among others, to:
 - a. take all reasonable steps to prevent such abuse;
 - b. reject the bid of any bidder if that bidder or any of its directors has abused the supply chain management system of the municipality or municipal entity or has committed any improper conduct in relation to such system; and
 - c. cancel a contract awarded to a person if the person committed any corrupt or fraudulent act during the bidding process or the execution of the contract.
- 4 This MBD serves as a certificate of declaration that would be used by institutions to ensure that, when bids are considered, reasonable steps are taken to prevent any form of bid-rigging.
- 5 In order to give effect to the above, the attached Certificate of Bid Determination (MBD 9) must be completed and submitted with the bid:

¹ Includes price quotations, advertised competitive bids, limited bids and proposals.

² Bid rigging (or collusive bidding) occurs when businesses, that would otherwise be expected to compete, secretly conspire to raise prices or lower the quality of goods and / or services for purchasers who wish to acquire goods and / or services through a bidding process. Bid rigging is, therefore, an agreement between competitors not to compete.
