7. SCOPE OF WORK: APPOINTMENT OF A SERVICE PROVIDER TO SUPPLY AND DELIVER ROTATING MACHINES POWER SYSTEM WITH ACCESSORIES FOR MOTOR TESTING LABORATORY

The aim of this motivation is to upgrade Rotating Machines Power system for Motor Testing laboratory to align with SANS/IEC test requirements, DMRE (NRCS) energy efficiency requirements and testing needs from Certification.

DMRE and NRCS have published a new VC specification VC9113 which requires electric motors to comply to efficiency requirements for a range of 0.55kW up to 375kW in power rating.

Laboratory guided by IEC 60034 standard provides a comprehensive set of guidelines and procedures for testing electric motors which help industry and Certification ensure that the motors are fit for their intended purpose.

The project seeks to streamline testing processes by integrating the latest technology with existing equipment to increase accuracy of measurements and improve testing turnaround time (TAT).

Ability to test to the latest efficiency specification SANS 60034-30: Efficiency of Electrical motors.

Rotating Machines Laboratory is accredited to testing electric motors according to SANS 1804 and IEC 60034 to ensure that they meet the required specifications and standards for performance, safety, and reliability.

Rotating Machine seeks to play a role and provide the industry with electric motor energy efficiency testing however, the lab is currently equipped to test up to 55 kW and this project will increase the capacity of the existing test bench to 200 kW.

2. APPLICABLE AND REFERENCE DOCUMENTS

1.	SANS 1804 series
2.	SANS 60034 series
3.	VC 9113

3. REQUIREMENTS

No	Requirement	Detailed description
1.	POWER SUPPLY loading bench	1. Efficient and modern loading test bench for electric motors. It packages all necessary components, equipment, and systems (load/dyno/brake unit, transducer, mounting table, accessories, instruments, etc) for efficiently conducting tests on electric motors rated from 150 kW up to 375 kW. 2. Output Power Range: 150 kW up to 375 kW 3. Test Speed Range: 400 rpm – 6 000 rpm 4. Heaviest Test Sample Weight: 4 tons
2.	TORQUE TRANSDUCER AND DISPLAY SPECIFICATION	1. Read, display, and transmit*: 2. Output Power: 150 kW up to 375 kW 3. Speed: 400 rpm – 6 000 rpm 4. Torque: Up to 10 000 Nm 5. The Transducer Unit should come with a valid calibration certificate issued by an accredited calibration lab—ILAC (International Laboratory Accreditation Cooperation) accreditation. A manufacturer's calibration certificate is not sufficient unless accredited. 6. Transducer Unit should be easily removable for future calibration purposes. (*) Transmit: The torque transducer and display system should have PC interfacing software, cables, and accessories for printing raw data.
3.	TORQUE TRANSDUCER SUPPORTING STRUCTURE	1. Testing process involves constant set up and set down of samples, almost twice a week. Due to this, depending on the type of the torque transducer, a supporting structure may be key to ensuring longevity of the transducer unit when motor samples are being swapped.
4.	COUPLING	1. Motor testing requires set up for high precision speed measurement, made with materials capable of enduring the highest torque specified and high temperatures (up to 100 °C) 2. Coupling accessories (joining torque transducer and loading unit): 3. Refer to shaft sizes of the Transducer and loading unit (dyno/brake). 4. Coupling accessories and pieces (joining torque transducer and sample).
5.	SHAFT ALIGNMENT UNIT	1. Precision shaft alignment is key to minimizing vibration across the test bench, between the Brake/dyno and torque transducer, and secondly, between the torque transducer and the motor sample. 2. A motor alignment unit should cater from the smallest to the largest motor, considering different shaft diameters and should cater for motor test bench set up and its accessories as described.
6.	MOUNTING TABLE	FEATURES 1. Automated table height management (raise and drop) / Easy and low-effort mechanical adjustments (height level based on shaft height) Electric motor shaft heights

		are standard – height level can be preset (low tolerance) - Automated axial and horizontal angle management / Easy and low-effort mechanical adjustments (axial and horizontal angle alignment management based on motor shaft position vs torque transducer position) - Accessories for mounting foot-mounted motor samples. - Rigid table position locking. - Stability on the floor. 3 angle indicators (transducer, axial, and horizontal angles on the motor) DIMENSIONS - Refer to dimensions of 355 frame size and other sizes as per the Informative table below, Test bench 4. - Height: $\pm 50\%$ of average human height
7.	EASILY AND EFFICIENTLY JOIN AND UNJOIN (MECHANICALLY) A MOTOR SAMPLE SHAFT TO THE TORQUE TRANSDUCER SHAFT	- Electric motor undergoes about 10 different tests on the test bench – some require the shafts of the motor and the torque transducer to be mechanically joined and some require the actions of unjoining the shafts and rigidly clamping the motor to the test bench to be performed speedily to continue with tests while the machine is still in hot (normal operating temperatures), examples are No-load tests, vibration tests, sound level tests, etc. - Refer to point 3 and point 6, Torque transducer supporting structure and Mounting table. - A feature that will enable the motor shaft to be disjoined from the torque transducer shaft (slide out) easily and efficiently without the use of lifting equipment (overhead crane) is key in ensuring that the tests may continue without the motor temperature dropping to cooler temperatures. This feature is also key in ensuring that the time spent to perform the actions of unjoining the shafts and rigidly clamping the motor to the test bench is shortened.
8.	LOADING/BRAKE/DYNAMOMETER UNIT	- Brake/Dynamometer (Digitally adjusted) 400 – 6 000 rpm 150 kW up to 375 kW Cooling: cooling system installation accessories (unless the loading unit is self-cooled) 2 - 3 brake unit temperature measuring points (display interface) - Brake unit protective device
9.	LOADING/BRAKE/DYNAMOMETER UNIT CONTROLLER	- Control device: e.g. Digital DC power supply (compatible with loading unit to achieve specified outputs) - DC Load/torque stabilizer
10.	LOADING/BRAKE/DYNAMOMETER UNIT TABLE/SUPPORT STRUCTURE	Rigid supporting structure

4. INSTALLATION

Full installation to be done onsite at SABS Groenkloof premises by the service provider.

5. COMMISSIONING

The supplier will be responsible for the commissioning, training, and demonstration (short testing of samples for each connection point). Full commissioning needs to be conducted onsite and report to be accepted and signed off by the responsible SABS Test Officer/s or Technical Lead.

Note: During commissioning the supplier shall demonstrate all material, design, product, or service functionality. This will be compared to the requirements described in this product specification. Compliance will be confirmed by both SABS and the supplier signing off against each requirement.

6. TRAINING

Onsite training during commissioning needs to be provided by the service provider for 3 candidates including samples testing.

7. DOCUMENTATION

Instruction manual, electrical compliance certificate, software and safety data sheets will be supplied by the service provider.

Note: SABS will evaluate each document. SABS can decide at its own discretion if any document is not sufficient. In such a case the supplier will be responsible to update the document to SABS satisfaction.

8. SERVICES TO BE SUPPLIED BY SABS

The supplier is responsible for notifying SABS of any service that might be required for the installation, commissioning and operation of the equipment. This notification must be submitted together with the original quotation.

(a) an invitation for tender for income-generating contracts, that either the 80/20 or 90/10 preference point system will apply and that the highest acceptable tender will be used to determine the applicable preference point system; or

(b) any other invitation for tender, that either the 80/20 or 90/10 preference point system will apply and that the lowest acceptable tender will be used to determine the applicable preference point system,

then the organ of state must indicate the points allocated for specific goals for both the 90/10 and 80/20 preference point system.

Table 1: Specific goals for the tender and points claimed are indicated per the table below.

(Note to organs of state: Where either the 90/10 or 80/20 preference point system is applicable, corresponding points must also be indicated as such.)
