1 PURPOSE

- 1.1. To appoint a suitable multi-disciplinary built environment service provider, including the Occupational Health and Safety (OHS) Agent to provide professional services in planning, designing, and monitoring of construction for the material recovery facility (MRF), composting facility, and other supporting infrastructure in Kouga Local Municipality in the Eastern Cape Province, for a period of thirty-six (36) Months.

2 INTRODUCTION AND BACKGROUND

- 2.1 The Department of Forestry, Fisheries and the Environment (DFFE), as the custodian of the National Waste Management Strategy (NWMS) and the Extended Producer Responsibility (EPR) regulatory framework in terms of the National Environmental Management: Waste Act (NEMWA), is mandated to lead South Africa's transition towards an integrated, sustainable, and circular waste management system. The NWMS (2020) serves as a comprehensive policy framework that embeds the core elements of waste minimisation, improved service delivery, circular economy principles, compliance monitoring, and inclusive participation in the waste economy.
- 2.2 Pillar 2 of the NWMS (2020) emphasizes that "all South Africans should live in clean communities with well-managed and financially sustainable waste services." Key interventions under this pillar include the separation of waste at source, the safe and environmentally sustainable disposal of hazardous household waste, and effective integrated waste management planning. Pillar 3 focuses on mainstreaming waste awareness and fostering a culture of compliance, aiming for zero tolerance of pollution, litter, and illegal dumping. It includes interventions to "reduce pollution, littering, and illegal dumping". This strategy aligns the Department's approach to waste management with the objectives outlined in South Africa's National Development Plan: Vision 2030. Furthermore, in line with the South African government's commitment to global sustainability, we are signatories to the United Nations Sustainable Development Goals, particularly SDG12, which seeks to "ensure sustainable consumption and production patterns."
- 2.3 In advancing the implementation of the NWMS, the Department has prioritised the development of municipal waste management infrastructure as a strategic intervention to divert waste from landfill and unlock economic value within the waste sector. This includes targeted investments in Material Recovery Facilities (MRFs), buy-back centres, and recycling infrastructure such as pelletisation plants and composting facilities. However, the long-term sustainability and developmental impact of these interventions rely not only on the provision of infrastructure, but critically on the operational viability of facilities, institutional capacity at municipal level, and effective integration into downstream markets and value chains.

- 2.4 Within this context, the Branch: Chemicals and Waste Management (CWM) is advancing a sustainability-centred approach that integrates infrastructure delivery with EPR-driven support mechanisms. This approach aims to ensure that waste management facilities are not only constructed and handed over to beneficiary municipalities, but are fully operationalised, financially sustainable, and embedded within local economic ecosystems. A key component of this approach is the provision of targeted business development support, skills development, and training programmes for SMMEs and cooperatives, enabling effective facility management, material processing, and value addition within recycling value chains.
- 2.5 One of the initiated interventions entails the establishment of a Material Recovery Facility (MRF) within Kouga Local Municipality (KLM), located in the Sarah Baartman District Municipality (SBDM) in the Eastern Cape Province. According to the municipality's endorsed Integrated Waste Management Plan (IWMP) (2025–2030), waste recycling activities within the municipality remain limited, and the waste management system is characterised by several challenges, including persistent illegal dumping, the absence of a dedicated capital budget for waste management, and constraints in implementing capital projects identified in the Integrated Development Plan (IDP) due to budgetary limitations. These challenges have resulted in significant gaps within the municipal waste management system, emphasizing the need for improved waste minimisation, expanded recycling initiatives, and increased diversion of waste from landfill. The proposed intervention therefore seeks to address these systemic shortcomings by strengthening waste management infrastructure, enabling compliance with national waste management objectives, and supporting a transition towards sustainable and circular waste management practices within the municipality.
- 2.6 In addition to increased landfill diversion through the recovery, reuse, and recycling of priority waste streams, the aim is to also promote waste separation at source. It is expected to strengthen municipal capacity for waste sorting and material beneficiation, extend landfill lifespan, and support job creation and economic participation by local SMMEs, cooperatives, and waste pickers. The introduction of such infrastructure is further anticipated to enhance value addition, market readiness of recovered materials, and alignment with the National Waste Management Strategy and EPR objectives within the municipality.

When a person's name has been endorsed on the Register, the person will be prohibited from doing business with the public sector for a period not less than five years and not more than 10 years.
