1 INTRODUCTION

The South African Weather Service (SAWS) is a public entity of the Department of Forestry, Fisheries and the Environment (DFFE) and derives its mandate from the South African Weather Service Act (Act No. 8 of 2001 as amended). The public entity is listed as a Schedule 3A Public Entity in terms of the Public Finance Management Act (PFMA).

The SAWS is tasked with providing timely and accurate scientific data in the field of meteorology to the broader South African society: a combination of both public good and commercial services. The organization plays a vital role in South African public life, not just as a provider of key services, but also in empowering citizens to adapt to the effects of the ever-changing weather.

In March 2022, United Nations (UN) Secretary-General, Mr Antonio Guterres, announced that the UN would lead a new initiative aimed at ensuring that every person on Earth is protected from hazardous weather, water or climate events by the end of 2027 through the use of Early Warning Systems (EWS). This initiative is called Early Warnings for All (EW4All).

During the 2022 United Nations Climate Change Conference (COP27) in Sharm El-Sheikh, the UN Secretary-General tasked the World Meteorological Organization (WMO) to lead the EW4All effort and present an action plan to achieve the goal. The WMO has since entered into an agreement with the SAWS for the National Consultative workshop, which aims at identifying and addressing the gaps South Africa is currently experiencing in the reach of early warnings to all South Africans.

There are four pillars in an EWS that the EW4All initiative has adopted. The pillar leads internationally are as follows:

- Pillar 1: Disaster Risk Knowledge: United Nations office for Disaster Risk Reduction (UNDRR)
- Pillar 2: Observations and Forecasting: World Meteorological Organisation (WMO)
- Pillar 3: Dissemination and Communication: International Telecommunication Union (ITU)
- Pillar 4: Preparedness to Respond: International Federation of Red Cross and Red Crescent Societies (IFRC)

In South Africa, it is envisioned that the leads of the pillars will be as following:

- Pillar 1: Disaster Risk Knowledge: National Disaster Management Center (NDMC)
- Pillar 2: Observations and Forecasting: South African Weather Service (SAWS)
- Pillar 3: Dissemination and Communication: Dissemination and Communication: Department of Communications and Digital Technologies (DCDT)
- Pillar 4: Preparedness to Respond: Red Cross South Africa

The SAWS seeks the services of an experienced and versatile service provider to facilitate a three (3) day National Consultative Workshop from 26-28 August 2024, whereby stakeholders from the four national pillars of the EW4All initiative will be invited to take part. Following this workshop, a gap analysis report will be developed by this service provider. The report will be used as a starting block, highlighting existing gaps, in South Africa, that need to be addressed for early warnings to reach each person.

The report must be available within two (2) weeks post the National Consultative Workshop.

2 PURPOSE

The purpose of this document is to outline the technical specifications, scope of work, including the tasks and responsibilities of the successful bidder to:

- familiarise itself with the existing strategic plan, as well as progress and implementation challenges (annual performance plans)
- facilitate the strategic planning session with the Board and Senior Management of the SAWS.

3 BACKGROUND

Early Warning Systems are a proven, effective, and feasible disaster risk reduction and climate adaptation measures, that save lives and provide a tenfold return on investment¹. Yet, major gaps in early warning systems remain, especially when it comes to translating early warnings into risk-informed early actions.

Early Warnings for All (EW4All) is a global initiative to ensure that everyone on Earth is protected by early warnings by 2027. This initiative is being fast-tracked into action on the ground. The UN Secretary-General released in November 2022 the High-level **Executive Action Plan**² for this initiative, emphasising the urgent need to support the most-at-risk populations first.

An effective early warning system is:

- Multi-Hazard: systems designed to detect different hazards that may occur in isolation, simultaneously, or in a cascading manner
- End-to-end: systems that cover the entire range – from hazard detection to action – supported by accessible, understandable and actionable warning messages
- People-centred: systems designed with people in mind, empowering them to act on time and in an appropriate manner to reduce potential harm
- With a clear governance structure, partnerships and sustainable financing
- Aiming at continuous improvements based on monitoring and evaluation of the efforts being done by all stakeholders

¹ [Adapt now: a global call for leadership on climate resilience, Global Commission on Adaptation \(2019\)](#)

² <https://www.preventionweb.net/publication/early-warnings-all-executive-action-plan-2023-2027>

Template: Specifications / Terms of Reference for RFQ – Annexure H

The EW4All initiative comprises the four foundational pillars of early warning systems:

- Pillar 1: Disaster risk knowledge - systematically collect risk data and undertake risk assessments on hazards and vulnerabilities to improve risk understanding
- Pillar 2: Observations and Forecasting - develop hazard monitoring and early warning services
- Pillar 3: Dissemination and communication - communicate risk information so it reaches all those who need it, and is understandable and usable
- Pillar 4: Preparedness and response - build national and community response capabilities

While governments play a crucial role in driving action on early warning services for their citizens, adopting a "whole-of-society" approach that involves all stakeholders, including civil society and the private sector, can better strengthen and sustain early warning services. It's equally important to recognize that disasters and climate change affect people differently based on their gender, age, disability and other factors. Therefore, an intersectional approach is required to ensure that the early warning services are inclusive, responsive, and equitable. By involving all sectors of society and taking an intersectional approach, early warning services can be more effective in protecting most-at-risk populations from the impacts of disasters and climate change.

This national consultation is led by the South African Weather Service, and co-organized with the UN Resident Coordinator's Office, UNDRR, WMO, IFRC, ITU, locally the National Disaster Management Centre (NDMC), Red Cross South Africa and the Department of Telecommunications and Digital Technologies.

OBJECTIVES OF THE NATIONAL CONSULTATIVE WORKSHOP ON EARLY WARNINGS FOR ALL

- a) Review the current state of early warning systems in South Africa and evaluate the progress in implementing the four pillars of EW4All.
- b) Explore the linkages and alignment among ongoing and upcoming initiatives, and consolidate key stakeholder commitments to strengthen early warning services;
- c) Establish a national coordination mechanism / affirm existing national coordination mechanism to guide efforts to scale-up early warning programming across the four pillars and linking national and local engagement.
- d) Identify gaps in national early warning systems, with respect to the minimum core capabilities checklist tool provided by the EW4All initiative.
