The municipality utilizes a fiber internet line for a primary and radio links are used for a backup. The other three remote sites also use radio links for the internet and to connect back to main site.

With an increase in number of Cybercrimes the demand for advanced security for municipal systems remains a priority. Continuous monitoring, vulnerability assessment, mitigation, remediation, and review of the security logs remains an integral part of the primary defence

against cyber-attacks. Makhuduthamaga Local Municipality has standardized on Fortinet Firewalls across all four sites. The Firewalls are also used for VPN access and tunnels in addition to securing the environment. ESET NOD 32 endpoint antivirus and Sentinel One are used to protect the end points of the municipality.

The municipality is using cloud-based backups for daily, weekly, monthly, and yearly backups to safeguard data in the event of data loss or a disaster. The current cloud-based backup solution protects both physical and virtual servers of the municipality including the critical systems and user's data. The municipality also replicates data to an offsite environment on another data centre outside municipal buildings to ensure business continuity in case of an adverse event. Periodic backup tests are required to ensure that the backups are working and still intact.
