**INTRODUCTION, BACKGROUND, SCOPE, DELIVERABLES, BASIC SPECIFICATIONS,
REQUIREMENTS AND RESPONSIBILITIES, LEGISLATIVE-AND REGULATORY
REQUIREMENTS, PERMIT TO WORK.**

**Returnable Document****1. INTRODUCTION:**

Foskor (PTY) LTD is an opencast mining and beneficiation operation situated in Phalaborwa. The core business of the Phalaborwa operations is the mining and beneficiation of phosphate rock. (The Foskor operation situated in Richards Bay is primarily a producer of phosphoric acid, phosphate-based fertilizers, and lower volumes of sulphonic acid).

Foskor (PTY) LTD (Mining Division) is an Open Cast Mine that produces phosphate rock for export or domestic beneficiation. Approximately 2.2. million tons of phosphate rock is produced annually. The product is finely ground apatite mineral from coarsely crystalline calcium-fluoride-phosphate compound of igneous origin. The immediate and final products are to the domestic and international markets and provide the following advantages:

- Make South Africa self-sufficient from phosphate imports.
- Earn foreign currency from the export of the products.
- Create approximately 2000 direct job opportunities, with associated indirect job opportunities in the Greater Phalaborwa region.

The dominating rock type in the Phalaborwa area, older than 3000 million years, is granite-gneiss of the Archaic Complex. Intrusive in this are younger rock types of the Phalaborwa Igneous Complex. Inclusions of serpentine, talc and amphibole schist are found in the granite-gneiss and igneous rock.

2. BACKGROUND

Minerals and metal resources are finite, meaning that the lifespan of any mine is limited. Responsible closure involves planning and designing for closure in consultation with relevant authorities and stakeholders to achieve sustainable outcomes that are beneficial to the mining company and its employees, the environment and host communities.

Mine closure is a significant industry challenge requiring substantial financial provision to manage and addresses associated safety, environmental and social risks. Integrated mine closure is a

**Returnable Document**

dynamic and iterative process that considers environmental, social and economic issues at an early stage of mine development and is developed throughout the life of the mine.

Fundamental to this is the need to consider closure as an integral part of the mine operations' core business. Planning for closure from the point of designing the project is key in ensuring there are no negative impacts to air, soil, water, and ecosystems local to the site, and optimising post-closure land use opportunities and social transition outcomes.

Financial assurance is increasingly required by regulations as a guarantee that the funds required for the mine closure will be available to complete the closure as planned. To prevent mine abandonment mining companies are increasingly required to provide financial assurance in the form of funds to governments and communities as a guarantee that the resources to meet closure requirements will be available.

The financial provision must guarantee the availability of sufficient funds to undertake the rehabilitation of the adverse environmental impacts of the listed specified activities, rehabilitation of the impact of the prospecting, exploration, mining or production activities including the treatment of polluted or extraneous water, decommissioning and closure of the operation, redemption of latent or residual environmental impacts which become known in the future, removal of building structure and other objects and the remediation of any negative impacts.

Although the adoption of financial assurance programs is relatively new and has yet to be optimized and practical in all jurisdictions, cost recovery and enforcement of environmental clean up has been improved by financial assurance requirements.

The MPRDA, enacted in 2002 served as the cornerstone legislation for the mining industry in South Africa until 2015 when the Government Notice R1147 Regulations (GNR1147) were implemented. For mining operations which were established prior to the implementation of the GNR1147 regulations, the MPRDA continues to regulate the mining houses until March 2024 whereafter the GNR1147 regulations will apply.

The MPRDA sets out the requirement relating to the development of the nation's mineral and petroleum resources. It additionally aims to ensure the promotion of economic and social development through exploration and mining related activities. The requirement for financial provisioning in the MPRDA has been repealed and replaced by Section 24P of the NEMA, as

**Returnable Document**

mentioned, which provides that the holder of a mining right or permit must make adequate financial provision for rehabilitation of negative environmental impacts.

With the above being said Foskor (Pty) (Ltd) as a mining company is also legally to comply to the Mineral and Petroleum Resources Development Act (MPRDA), act no 28 of 2002, and the Government Notice R1147 Regulations (GNR1147) and in order to comply, financial provisions assessment must be determined and undertaken that guarantees to the authorities and various stakeholders of the sufficient funds that would be available to rehabilitate the environmental impacts that would have been caused by the mining activities hence the commissioning of this study to appoint an independent consultant to undertake an in-depth study to develop an integrated mine closure plan and mine closure costing for Foskor Phalaborwa mine.
