PART 2. BACKGROUND, OVERVIEW AND SCOPE OF REQUIREMENTS

12 BACKGROUND AND SCOPE OF WORK

12.1 Introduction

RFP number SFF/2024/NOE/1A/SP6 is for a service provider, referred to as the Tenderer in this tender document, to carry out a **feasibility study** referred to as Sub-Project#6 in the licence Block B2 in South Sudan.

South Africa's state-owned Strategic Fuel Fund ("SFF") signed an Exploration and Production Sharing Agreement (EPSA) with the Ministry of Petroleum, South Sudan government, in May 2019. Under this agreement, SFF will carry out E&P activities in Block B2 in partnership with South Sudan's national oil company, Nile Petroleum Corporation.

As part of the exploration program, SFF carries out geological and geophysical studies in Block B2 to increase the chance of hydrocarbon discovery. In order to fulfil the obligation SFF intends to acquire well data in Block B2 to firm up geological and geophysical models. Before the data acquisition project execution, SFF is seeking a technically competent service provider to conduct a **Feasibility Study for multiple options to acquire new Geological and geophysical data from Kedelai -1 well in Block B2, Jonglei Sub Basin, South Sudan by re-entry /sidetracking or drilling a new well.**

12.2 Background Information

The well data acquisition will assist in defining stratigraphic correlations and understanding the geology of Jonglei Sub-basin. The results will be used to (a) improve the time depth relationships and velocity models, (b) classify reservoir characteristics, (c) validate elements and confirm the active petroleum system.

Geologically, the area of study (Jonglei Sub-basin) is located in the southern part of Muglad Basin, a large rift basin related to the Central African Rift Zone. Jonglei Sub-basin remains unexplored, and its geology and oil potential are vaguely understood; however, it is expected to be the extension of the main Muglad Basin.

12.3 Objectives

To provide comprehensive techno-commercial analysis with reasoning and analysis, including site visit, to acquire new geotechnical data by either of methods of re-entry up to present TD /sidetracking to new TD or drilling a new well and summarize its financial implications with cost-benefit analysis.

Post-decision, the feasibility study is to be designed with the goal of achieving the following dependent on the chosen option.

- To collect cuttings and or sidewall cores for biostratigraphy, sedimentology and geochemical studies
- To collect wireline logs (or LWD) as per the programme to conduct G&G studies. Logs to be acquired are, not limited to: GR, Resistivity, density, neutron, calliper, sonic Vp & Vs, fluid analysis, formation test RFT, Gas log, etc.
- To collect formation pore fluid data and determine GWC and Sw from hydrocarbons detected while drilling, wireline logs and drill string testing.
- To acquire checkshot data for well seismic tie and velocity modelling/ time-depth conversion.

12.4 Scope of Study

Aspects related to defining the feasibility study to acquire well data in Block B2, South Sudan, include but are not limited to:

- Conduct a physical inspection of the well site and the approachability.
- Identify potential technical, operational, and economic risks associated with the operations.
- Evaluate alternative scenarios, such as different re-entry techniques, sidetracks, new drills, etc.

13 PROJECT EXECUTION PLAN

Tenderer must submit a description of the proposed feasibility study, including a Project Execution Plan (PEP), which will provide details of the specific activities in the project, the resources applied to the project, and the organization of the project. The major elements of a project execution plan are:

- Scope Definition
- Project scheduling
- Timelines as per deliverables (Milestones)
- Resource allocation

14 PROJECT DESCRIPTION

Licence Block B2 is located in the south-eastern portion of South Sudan and extends over an area of approximately 48,000 sq-km. The Area of interest (AOI) terrain is mainly flat and subjected to seasonal flooding of the White Nile River. It consists of swamps (20%) and floodplains (80%) figure1 and 2.

Kedelai-1 well was drilled in Block B2, Onshore South Sudan, in 2007. The well is located 200km north of Juba in Jonglei State (Figure 1 and 2). The well is situated in the White Nile floodplain in an area known as the Sudd - one of the world's most expansive and important wetlands and an environmentally sensitive area. The natural surface soil is 'Black Cotton', a clay that is rock hard when dry but very unstable when wet.

Figure 1 Satellite image showing of Block B2 outline and location of Kedelai well

Figure 2 Physiographic map showing location map of Kedelai-1 well and legacy seismic lines in Block B2, South Sudan

Kedelai well was partly drilled to the depth of 2408m and did not intersect the targeted reservoir. The minimum essential well data for geological and geophysical studies was not acquired before the well was suspended. The well was suspended due to hole conditions and increasing adverse weather conditions. It was suspended with the intention of resuming drilling activities at the onset of the dry season. However, the plan was unfortunately not implemented.

While pulling out of the hole to suspend the well, the string became stuck at the stabiliser with the bit at 2,200m. Attempts to jar free were unsuccessful, and the string was backed off at this point, leaving 23.24m of BHA in the hole. The well was then suspended by setting two plugs, each 150m long, above the fish, two plugs across the 9 5/8" casing shoe and one just below the surface. This provides the well with two mechanical barriers between the open hole and surface and enough cement plug to allow a sidetrack well to be drilled later if required. Figure 3 is the Kedelai well schematic diagram.

The available data from the well encompasses a partial gamma-ray log from 88 to 1127 meters and well cuttings from the surface to the total depth. Moreover, biostratigraphy and sedimentological studies have been conducted based on these well cuttings. Unfortunately, the results of these studies are inconclusive, as drill bits with tungsten-carbide inserts and a diamond bit used during drilling may have caused the claystone/shales to grind down, leading to mud dispersal and loss of washed cuttings. Consequently, geological correlations (age, structural framework) between the Jonglei sub-basin and the main Muglad basin are not consistent.

Figure 3 Kedelai well schematic

2D seismic data is available in the block, and one line crosses the existing well location, as shown in Figures 2 and 4. Unfortunately, checkshots, VSP or sonic data are not available; therefore, conducting seismic tie and time-depth relationship models is problematic. As a result, calibrating seismic data to depth has a high level of uncertainty.

Figure 4 Seismic line passing through Kedelai well location

Given the limited legacy data, SFF has deemed it necessary to acquire more conclusive well data to augment the ongoing geological studies of the Jonglei Sub-basin. Different scenarios are to be explored to execute data acquisition. The final decisions will be made based on technical and economic feasibility. Below are three scenarios that are described, but not limited to.

Scenario 1: Well re-entry and logging in the existing borehole

The objective is to re-enter the existing well, drill out cement plugs and acquire data up to drilled depth as per plan. Refer to figure 2 for the well schematic. Once all the logs are acquired, the well will be suspended after putting the suspension plug.

Scenario 2: Well re-entry, extend TD and logging

SFF intends to re-enter and deepen the depth of the well by an additional 800-1500m to intersect the reservoir. The operation can be achieved by either sidetracking or drilling out the fish that was left in the hole. Data acquisition will be conducted as per the program. If hydrocarbons are discovered, the well may be tested to determine the volume, quality, and type of hydrocarbons. After

completion of all the tests and data acquisitions, a well will be suspended following internationally recommended standards.

Scenario 3: New well drilling and logging full suite of data

On the other hand, if well re-entry is not feasible, then SFF intends to drill a new well to achieve the set objectives. Final drilling site selection will be based on further analysis of available data. The well will be drilled to approximately a depth of 3400 - 4000m to intersect both primary and secondary targets (Bentiu and AbuGabra formations).

TD of the well will depend on the presence of hydrocarbons in the primary target Formation. In case of a discovery, the well may be tested to determine the volume, quality, and type of hydrocarbons and TD of the well will be decided accordingly.

Upon completion of all the test and data acquisitions, the decision about the well will be taken based on internationally recommended standards.

22.4 STAGE 3: Final Weighted Scoring of Price and Specific Goals

(a) **Step Four - Price Criteria [Weighted score 80/90 points]**

Evaluation Criteria
• Commercial offer
• Commercial discounts ¹

SFF association will utilise the following formula in its evaluation of Price:

$$PS = 80/90 \left(1 - \frac{Pt - Pmin}{Pmin} \right)$$

Where:

Ps	=	Score for the Tender under consideration
Pt	=	Price of Tender under consideration
Pmin	=	Price of lowest acceptable tender

- b) Points for this tender (even in the case of a tender for income-generating contracts) shall be awarded for:
- Price; and
 - Specific Goals (weighted score 10/20)

¹ Only unconditional discounts will be taken into account during evaluation. A discount which has been offered conditionally will, despite not being taken into account for evaluation purposes, be implemented when payment is effected

SPECIFIC GOALS:

SFF has identified in its Supply Chain Management Policy, specific goals, which will be used to promote transformation and empowerment.

A maximum of 10/20 points will be awarded to a tenderer for specific goals specified in the RFP as follows:

No	SPECIFIC GOAL	MAX SCORE	POINT ALLOCATION	EVIDENCE
1	At least 51% Black Owned	6 (if 90/10 system used) 10 (if 80/20 system used)	6 points = Yes 10 points= Yes 0 points = No	Valid BBBEE certificate to verify ownership

IN RESPECT OF EME OR QSE:

Proof of documentation must be attached in the form of:

SFF can only award points provided sufficient information and required documents are correctly completed and returned with the proposals.

POINTS OBTAINED FOR PRICE SHOULD BE ADDED TO POINTS OBTAINED FOR SPECIFIC GOALS.

TENDER MUST BE AWARDED TO THE TENDERER SCORING THE HIGHEST POINTS. HOWEVER, A CONTRACT MAY BE AWARDED TO A TENDERER THAT DID NOT SCORE THE HIGHEST POINTS ONLY IN ACCORDANCE WITH SECTION 2 (1)(F) OF THE PPPFA 05 OF 2000.

Step Five - Post Tender Negotiations (if applicable)

- Tenderers are to note that SFF may not award a contract if the price offered is not market-related. In this regard, SFF reserves the right to engage in Post Tender Negotiations with the view to achieving a market-related price or to cancel the tender. Negotiations will be done in a sequential manner i.e.:
 - first negotiate with the highest ranked tenderer or cancel the bid, should such negotiations fail,
 - negotiate with the 2nd and 3rd ranked tenderers (if required) in a sequential manner.
- In the event of any Tenderer being notified of such short-listed/preferred tenderer status, his/her bid, as well as any subsequent negotiated best and final offers (BAFO), will automatically be deemed to remain valid during the negotiation period and until the ultimate award of business.
- Should SFF conduct post tender negotiations, Tenderers will be requested to provide their best and final offers to SFF based on such negotiations. Where a market related price has been achieved through negotiation, the contract will be awarded to the successful Tenderer(s).
