CERTIFICATE OF INDEPENDENT BID DETERMINATION

- 1 This Standard Bidding Document (SBD) must form part of all bids¹ invited.
- 2 Section 4 (1) (b) (iii) of the Competition Act No. 89 of 1998, as amended, prohibits an agreement between, or concerted practice by, firms, or a decision by an association of firms, if it is between parties in a horizontal relationship and if it involves collusive bidding (or bid rigging).² Collusive bidding is a *pe se* prohibition meaning that it cannot be justified under any grounds.
- 3 Treasury Regulation 16A9 prescribes that accounting officers and accounting authorities must take all reasonable steps to prevent abuse of the supply chain management system and authorizes accounting officers and accounting authorities to:
 - a. disregard the bid of any bidder if that bidder, or any of its directors have abused the institution's supply chain management system and or committed fraud or any other improper conduct in relation to such system.
 - b. cancel a contract awarded to a supplier of goods and services if the supplier committed any corrupt or fraudulent act during the bidding process or the execution of that contract.
- 4 This SBD serves as a certificate of declaration that would be used by institutions to ensure that, when bids are considered, reasonable steps are taken to prevent any form of bid-rigging.
- 5 In order to give effect to the above, the attached Certificate of Bid Determination (SBD 9) must be completed and submitted with the bid:

¹ Includes price quotations, advertised competitive bids, limited bids and proposals.

² Bid rigging (or collusive bidding) occurs when businesses, that would otherwise be expected to compete, secretly conspire to raise prices or lower the quality of goods and / or services for purchasers who wish to acquire goods and / or services through a bidding process. Bid rigging is, therefore, an agreement between competitors not to compete.

The project involves building capacity through skills transfer sessions to Departmental staff and conducting provincial workshops to key stakeholders.

1.2. This objective of this project is:

1.2.1. to create an awareness and understanding the need / importance of implementing:

- iv) Due to consequential circumstances of the Covid-19 pandemic, the bidder needs to factor all the necessary regulations and health and safety requirements in their Bid Proposal.

2 BACKGROUND

- 2.1 The road network forms the backbone of development in any economy. In South Africa however, the planning and development methodologies of the previous dispensation have deprived a large portion of the population of this country of basic transport infrastructure, leading to a lack of access and mobility and making transport unaffordable for them. It is thus important for transformation in the road infrastructure not to focus purely on technocratic road needs. Instead, it should be broad and comprehensive in assessing the demands placed on our road network (i.e. economic, social and environmental demands), which if addressed will contribute to the realization of key national policy priority areas that seek to redress the imbalances of the past and support economic growth.
- 2.2 The S'hamba Sonke Programme (SSP) is an initiative of the National Department of Transport to develop and maintain South Africa's secondary road network while at the same time placing the rural economy on a labour absorptive growth path. Some of the key focus areas are:
- The maintenance of critical rural arterial routes;
 - Cost-efficient use of labour absorptive methodologies in roadworks;
 - **Implementation of an Asset Management Systems as a tool to support investment decisions for road infrastructure;**
 - Improving Access to Schools and Clinics;
 - Delivering a Safe Road environment; and
 - **Contractor development and localization.**
- 2.3 The SABS adopted the Asset Management System (ISO55000), which was developed by the International Organization for Standardisation (ISO) and published it as SANS 55000.
- 2.4 This National Standard (SANS 55000) supports compliance to requirements of the Government Immovable Asset Management Act (GIAMA - Act 17 of 2007), which is applicable to a range of Government Infrastructure Departments / organizations, such as Road Authorities, Public Works, Health, Educations, etc. In essence, SANS 55000 is a standard covering management of physical assets owned by Government. The standard was split into two parts:

- 2.5.1 Part 1 - Specification for the optimized management of physical infrastructure assets; and
 - 2.5.2 Part 2 - Guidelines for the application.
- 2.5 The Technical Methods for Highways (TMH) consists of a series of publication, used to either prescribe or to provide guidelines on various aspects relating to highway engineering. The documents are primarily aimed at ensuring uniformity throughout South Africa.
- 2.6 The TMH22 manual provides a template, guidance and methodologies on the manner in which road infrastructure assets should be managed. It establishes a uniform and integrated system on which the asset conditions are collected and reported on, to ensure an equitable funding distribution, so that the maintenance and rehabilitation of the road infrastructure is ensured.
- 2.7 TMH 22 manual covers the following aspects: -
- 2.7.1 The benefit to the roads authority relating to asset management;
 - 2.7.2 A brief description of the policies and requirements of the Road Authority in terms of current legislation;
 - 2.7.3 The various levels of asset management and the minimum levels required;
 - 2.7.4 Processes and methodologies for higher levels or more advanced asset management;
 - 2.7.5 Guidance for the implementation of the Road Asset Management System;
 - 2.7.6 Guidance for the development of inventory data and asset valuations;
 - 2.7.7 Requirements for the collection of usage and condition data and time intervals thereof; and
 - 2.7.8 Methodologies for the reporting on the condition of the assets;
- 2.8 Methodologies for the determination of the maintenance and rehabilitation requirements of the road network; and Identification for the ongoing improvement of the road authorities' Asset Management System.
- 2.9 In summary, TMH22 manual provides the background and the template for Road Authorities to implement and sustain efficient Asset Management Systems to ensure the road network performs at the required minimum level of service.

2.10 The SANS 1393 (Construction Management Systems):

2.10.1 was specifically developed for the construction industry in its broadest terms, and this uniquely South African Standard can be implemented by all companies within the construction industry including upstream value chain providers with a pragmatic and explicit focus on the effective and efficient use of construction resources;

2.10.2 sets performance measures against time, cost, quality, site management and the management of health and safety;

2.10.3 scheme is aimed at supporting contractor performance improvement as well as risk management in the construction industry; and

2.10.4 establishes minimum acceptable standards that are necessary for running a contracting company and for supervising building and construction works. It will lay the foundation for clients to better assess the capabilities and performance of contractors in a uniform and consistent manner.

2.11 As part of the implementation process of these standards, it is necessary for the Department to provide leadership, direction and support to the roads industry and other stakeholders that can adopt these standards into their business operations and implement these national standards in a uniform way.

2.12 Standards can be used by organisations as a key risk instrument to improve compliance, efficiency, address safety and meet customer requirements.

2.13 Of particular importance is to note that:

2.13.1 The ISO standard 'ISO 55000 Asset Management' was published in January 2014.

2.13.2 This new standard provides a fresh focus upon the purpose and application of asset management within organisations.

2.13.3 The significant interest in the standard shown by asset owners, regulators and certification bodies reflects a universal business desire to improve the value returned to organisations, through the effective management of physical assets.

2.13.4 To realise that benefit, organizations (Road Authorities) require knowledgeable people capable of applying an asset management certification process who, at the same time, can use that process to provide the value that business desires.

2.14 The long-term purposes include:

2.14.1 To establish the minimum knowledge and comprehension of asset management to perform duties as an assessor for ISO 550001 and the GFMAM.

2.14.2 To provide guidance for organizations providing training in preparing for ISO55001 adoption and evaluation.

2.14.3 To provide the basis for certification of ISO 55001 assessor/auditor personnel

2.14.4 To support the introduction of ISO55000, and ensure that organisations derive benefit from the use of these standards.
