SECTION 3: BACKGROUND, OVERVIEW AND SCOPE OF REQUIREMENTS

1 BACKGROUND

Transnet Freight Rail (TFR) continuously seeks to enhance operational efficiency, reliability, and data-driven decision-making across its locomotive, rolling stock, and infrastructure value chains. The organisation generates large and diverse volumes of operational data from sources such as on-board locomotive black boxes, Vehicle Identification System (VIS) tags, telemetry and GPS feeds, and maintenance management systems.

These datasets are critical for monitoring fleet performance, predicting failures, planning maintenance, optimising fuel and energy consumption, and improving train scheduling. However, extracting actionable insights from these complex and high-volume data sources in real time has become increasingly difficult using conventional tools and manual analysis methods.

To address this challenge and promote applied innovation, the Technology Management (TM) department within the Resource Management (RM) division intends to collaborate with a Gauteng-based Academic Institution or a research and technology organization with advanced Artificial Intelligence (AI) and Machine Learning (ML) expertise. The objective of this collaboration is to develop analytical models or a unified digital platform that enhances data analytics capabilities and provides a single, reliable source of information for the organization.

The appointment of an accredited academic institution or technology organization, with qualified and registered with professional bodies team is preferred over open-market suppliers because the requirement is research-oriented, focused on developing and validating AI models using Transnet Freight Rail's proprietary data. The project requires open collaboration, IP retention, and capacity building — outcomes that are best achieved through academic research partnerships rather than commercial software procurement.

Through this collaboration, TFR aims to:

- Enable predictive and prescriptive analytics to improve asset/ fleet reliability, maintenance planning, and failure prevention and operational decision-making.
- Develop domain-specific AI models for areas such as traction, brakes, bogies, couplers, and energy management.
- Enhance incident investigation through advanced data correlation and anomaly detection
- Optimize scheduling and deployment of resources (e.g. locomotives, wagons, personnel, fuel etc) and identifying potential bottlenecks before they occur.
- The AI solution shall assist with predictive maintenance of the resources, provide visual insights for quick decision-making to support strategic planning with data-driven insights.
- Encourage innovation and capacity building through student involvement, joint research and development

2 EXECUTIVE OVERVIEW

Whereas Transnet is seeking a partner(s) to provide solutions to AI tools to enhance data analysis at Transnet Freight Rail, it also seeks to improve its current processes for providing these Services to its end user community throughout its locations.

The selected Supplier/Service provider(s) must share in the mission and business objectives of Transnet. These mutual goals will be met by meeting contractual requirements and new challenges in an environment of teamwork, joint participation, flexibility, innovation and open communications. In this spirit of partnership, Transnet and its Supplier/Service provider(s) will study the current ways they do business to enhance current practices and support processes and systems. Such a partnership will allow Transnet to reach higher levels of quality, service and profitability.

Specifically, Transnet seeks to benefit from this partnership in the following ways:

- 2.1 Transnet must receive reduced cost of acquisition and improved service benefits resulting from the Supplier/Service provider's economies of scale and streamlined service processes.
- 2.2 Transnet must achieve appropriate availability that meets user needs while reducing costs for both Transnet and the chosen Supplier/Service provider(s).
- 2.3 Transnet must receive proactive improvements from the Supplier/Service provider with respect to supply/provision of Goods/Services and related processes.
- 2.4 Transnet's overall competitive advantage must be strengthened by the chosen Supplier/Service provider's leading-edge technology and service delivery systems.
- 2.5 Transnet end users must be able to rely on the chosen Supplier/Service provider's personnel for service enquiries, recommendations and substitutions.
