SECTION 3: BACKGROUND, OVERVIEW AND SCOPE OF REQUIREMENTS

1 BACKGROUND

1.1 The fittings are mechanically attached to the structure tunnel wall by a mechanical expansion bolt or epoxy-grouted stud into a hole, which is drilled in the tunnel lining. Fittings make provision for the attachment of earth wire, contact wire, catenary wire, and feeders, and are required to pivot in the case of auto-tensioning systems. Ermelo Depot is planning to replace tunnel fittings at the 25kV AC Overvaal tunnel section for the following reasons:

- The fittings were last replaced during the 2018/2019 shutdown and as they get old, they become covered with dirt and coal dust which can cause insulation failure and flashover when the train is passing.
- They were only maintained during the 2021/2022 shutdown with hydrophobic paint to mitigate the accumulation of dust. This maintenance was to enhance the durability and cleanliness of the fittings. However, there are impacts and effectiveness of this method:

Effectiveness of Hydrophobic Paint:

Long-Term Considerations: Fittings treated with hydrophobic paint may degrade over time due to factors such as exposure to coal dust, moisture, and other environmental elements. This has led to a decline in the overall effectiveness of the paint and the condition of the fittings.

Impact on Future Maintenance: Given that there has been a longer period without cleaning, the fittings may be in a state of disrepair that warrants replacement rather than further cleaning. This will ensure the continued safe and reliable operation of the tunnel.

• Deterioration of the Fittings Performance and Lifespan:

lack of MOM machine contracts meant using ladders as a result the routine maintenance, and the cleaning program of the fittings could not be proactive. Hence, the lack of adequate maintenance may have resulted in fast-tracked deterioration of the performance levels of the fittings as observed during the infrared inspections (Appendix A)

• Safety and Compliance: Dirty/damaged fittings increase the risk of flashovers and other safety hazards. Replacing the fittings ensures compliance with safety standards and reduces the potential for safety incidents, protecting workers and the public.

• Operational Disruptions: The fittings failures could result in unplanned and extended downtime, which can cause disruptions to the overall operation of the tunnel. This can negatively impact the productivity and service levels of the tunnel, as well as the volumes, and incur significant costs due to the loss of operational time.

• Customer and stakeholder satisfaction: Replacement and Proactive maintenance can contribute to safe and smoother operations and higher satisfaction for customers and other stakeholders relying on the services of the tunnel.

• Economic Efficiency: Reacting to fittings failures as they occur, can be more costly in the long run due to emergency repairs and downtime. Proactive replacement during scheduled shutdown projects allows for a more efficient allocation of resources and labour.
