

Q

Is the contract based on Annex F of the CIDB (as per clause T1.2.1 on page 4, and Annexure 2 on page 64)? You have provided an Agreement and SLA which appear to be sufficient. And the scope of works is not construction. We assume there is no need for an additional contract in the form of CIDB Annex F.

A

AS per Tender/Bid advert instructions presented on the clarification meeting we raised that CIDB is not applicable for this contract.

Q

The minimum qualifications listed are only engineering qualifications (as per page 7). Can this list of qualifications be extended to include B.Sc Geol. and other Earth Sciences? (As the list of professional registrations does already include Pr. Sci. Nat. which relates to the Earth Sciences

A

Unfortunately, we can't because of the risk on exclusion of the new and emerging contract.

Q

For those devices which require expansion of network with complete new installations – please may we have the number of new devices required?

A

C3.3.2 River Gauges (10 per annum)

C3.3.3 Rain Gauges (15 per annum)

C3.3.4 Weather Stations (5 per annum)

C3.2.5 Stormwater Gauges (2 per annum)

Q

C3.3.14 Real-time Position and Temperature Units: Please clarify if the period number of months is 24 (as per the Excel BOQ) or 36 (as per scope pg. 61)? We assume 36 as tender procurement doc is the official document.

A

Please quote on exact quantities shown on your BOQ.

Q

Pre-approval is required for “all sites activities” (as per clause 16 on pg 40).

- Are fieldwork approvals required for all activities including maintenance and repair? If so, how does this affect the required 7-day turnaround? For example, problem identified on a Friday, conveyed to Employer on the Monday, work approved on the Wednesday, there would only be 1 day remaining for implementation before a penalty becomes enforceable.
- Or can it be clarified that: pre-approval is only required for “new site installations” and not relevant to maintenance of existing sites?

A

As per clause 3.15.1, a successful contractor will have to submit programme within 14 days of the award of the contract.

And besides the counter starts from the day of the approval.

Q

My name is Teboho and I’m a Land Surveyor at Wall Marriott Paul & Borgen Land Surveyors. I’d like to find out if there are requirements for land surveying services regarding the above referenced bid with the title “**Coastal Stormwater Catchment Management (CSCM) field instruments and Durban Beach monitoring for a 36-month period**” and if so can you kindly provide me with more details. I look forward to your reply. Thanks.

A

Unfortunately, not...no requirements for land-surveying.

These are weather forecasting related filed instrumentation related to rainfall data generating specifics.
