

ERRATUM

BID NUMBER: OTT/450/202102

SUPPLY AND DELIVERY OF FUEL FOR A PERIOD OF THREE (3) YEARS

NOTICE

Following an internal review Denel Overberg Test Range (OTR) decided to scrap the requirement included in the Request for Tender document, Part D Clause 6.7 for the successful service provider to install automatic tank gauges (ATG) to Denel Overberg Test Range's storage tanks within the first year of the agreement. Bidders are thus no longer required to provide in their Bids for the installation of ATGs. Item 5 in the list of Mandatory Requirements, Part D Clause 8.1, will be scrapped as well.

OTR still intends to engage with the successful service provider during the first year of the agreement on the installation of automatic tank gauges (ATG) to all or some of its storage tanks. This will be considered as a separate requirement in addition to the requirements contained in the Request for Tender document. Should OTR at the time decide to proceed with the installation or leasing of such gauges, the decision will be at OTR's sole discretion and will be informed, inter alia, by budget provision considerations.

Bidders are requested to, as optional requirement submit with their Bids information on proposed automatic tank gauges (ATG) to be considered by OTR. Information provided should include application and technical information, specification as well as cost estimate(s).
