

C4: SITE INFORMATION

C4.1: SITE INFORMATION

C4.1.1 Material site investigation

C4.1.2 Pavement and layer works design

In order to optimize the use of the materials available on site and taking into account the insitu sub-grade material which consists of unsuitable quality material and the expected material available from borrow pits, the following pavement design is proposed:

Earthworks for cell 1

Installation of lining in cell 1

Construction of stormwater berms

Construction of evaporation dams

Refurbishment of weigh bridge

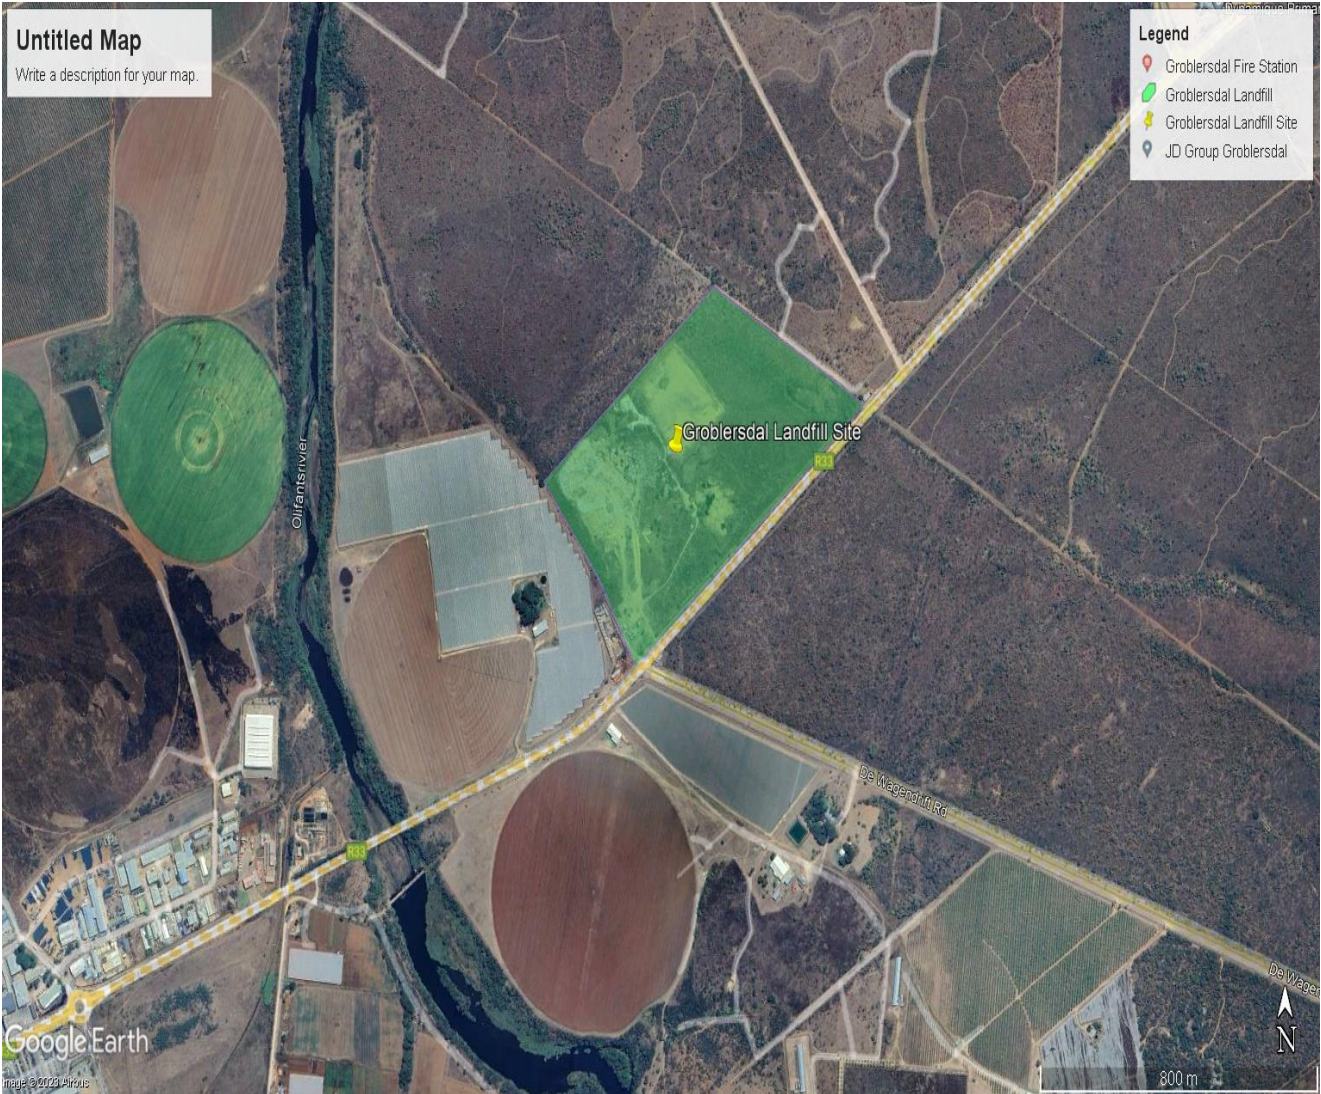

Construction of administration building

Construction of perimeter and side access roads

Installation of monitoring borehole

Construction of discharge pond

C4.2: LOCALITY PLAN

C4.3 TENDER DRAWINGS
