TERMS OF REFERENCE

1. Background

The Eastern Cape Parks and Tourism Agency (ECPTA) is implementing the N2 Wild Coast Biodiversity Offset Project which is guided by the Biodiversity Offset Policy and the Eastern Cape Protected Area Expansion Strategy (ECPAES), a systematic conservation planning product that identifies priority areas for conservation estate expansion and is aligned to the National Protected Area Expansion Strategy (NPAES). The project is designed to successfully compensate for significant negative residual impacts on biodiversity arising from project development after appropriate prevention and mitigation measures have been taken. The N2 Wild Coast Toll Highway (hereinafter referred to as the 'N2') was granted a positive record of decision (RoD) in terms of the Environment Conservation Act, 1989, on 19 April 2010. This required that a Biodiversity Offset Agreement (BOA) and all feasible alternative options must be considered. Subsequently, the ECPTA signed an agreement with SANRAL to implement the N2 Wild Coast Biodiversity Offset project per the terms and conditions of the memorandum of agreement and the Biodiversity Offset Agreement. Therefore, the ECPTA has identified potential offset candidate sites in the Wild Coast for the Biodiversity Offset project ranging from the Umtamvuna to uMzimvubu Rivers. These candidate sites are mostly along the coastal line.

2. Motivation

In 2020, the ECPTA commissioned Sigwela & Associates to produce implementation plans for the N2 Wild Coast Offset Project. While these documents highlight key principles associated with the drivers of degradation, basic ecosystems rehabilitation and management of the sites, the ECPTA has determined that detailed site-specific plans are required to identify specific management and ecosystems rehabilitation activities required to maintain biodiversity and productivity within each candidate site. Taking into account the existing information, the plans will be developed to facilitate improved management of terrestrial landscapes across the ecosystems, namely Woodlands/Forests, Grasslands, Wetlands including Coastal and Estuarine areas. The net gain to biodiversity through the project will include improved conservation of habitats, species, ecological processes, and ecosystem goods & services associated with the sites. People's use and cultural values associated with biodiversity will need extraordinary consideration. In general, the plans will fill the key gaps in the knowledge and will be used to make more informed decisions on the management of the biodiversity

in the N2 Wild Coast Biodiversity Offset receiving sites. This exercise shall be done in conjunction with land-owning communities, relevant government departments and other partners. The results of these plans must be presented physically or virtually at the Review Panel of ECPTA Ecologists. The plans for each site are to be developed in line with relevant legislation such as the National Environmental Management: Biodiversity Act and the NEM: Protected Areas Act, as well as associated guidelines and regulations. The service provider must also provide supporting documentation and data, including property descriptions and shapefiles for the sites.

3. Scope of Work

The final deliverable for the project should be a Site Ecological Management Plan for each of the sites or for each cluster. The other plans mentioned below in the document should feed into this overarching living document, however all plans must be submitted as separate documents. The key deliverable activities listed below are required for each priority area identified to achieve the biodiversity offset. The name and locations of the sites are listed below in Table 1. The reports produced for each site must include the details, type and quality of forest/ other veg type on the assessment area with the basis for the differentiation explained as set out in the reports and the potential for rehabilitation of transformed portions of the assessed areas back to their natural state must be evaluated. A specific Site Ecological Importance Index to assign ecological condition and sensitivity of each site or habitat description within each area must be included.

Develop site-specific rehabilitation plans for each offsite candidate site, comprising the following components:

a) Invasive alien plant control component for each of the offset sites.

- Using the existing information as a foundation, develop site-specific monitoring, control and eradication plans for alien and invasive plants as per the *NEM: Biodiversity Act Guidelines for monitoring, control, and eradication plans (2015)*, including *inter alia*:
- Undertake infield Alien Invader Plant Species (AIPs) assessment;
- Compile environmental-legal framework and summarise all relevant legislation applicable to the control and management of AIP species within each of the sites;
- Categorise each alien plant species occurring according to their status in terms of the NEM: Biodiversity Act national lists of invasive species;
- Assess and map the distribution and density of alien and invasive plants within each offset site (maps should comply with Working for Water mapping guidelines, be developed at least at a 1: 50 000 scale, and should be ground-truthed);
- Subdivide (spatially) the land parcels into management compartment units;
- Develop measures (actions plan with timeframes) to control or eradicate Listed Invasive Species within each management unit. These measures should consider integrated invasive alien plant control principles, incorporating mechanical, chemical and biological control, as appropriate;
- Compile a general Management Plans for the eradication and control of all key and listed AIPs recorded on each site;
- Compile a preliminary monitoring program against which the progress of control and eradication measures can be compared and monitored to evaluate the success of control measures and the spreading and/or establishment of new problem areas for all of the sites;
- Cost the measures to control or eradicate the listed Invasives species within each offset site; and
- Solicit inputs from communities and stakeholders regarding the draft plans.

b) Wetland rehabilitation component for each of the offset sites.

- Using the existing information as a foundation, accurately delineate and characterize all wetlands occurring on each site through a combination of desktop and fieldwork.

Reference to this work is made towards SANBI's Guidelines for Mapping Wetlands in South Africa (2018) when mapping the degraded wetlands within each offset site;

- Objectively quantify the impacts of human activity or clearly visible impacts on wetland health, and convert the impact scores to a Present Ecological Status (PES) score;
 - Undertake site-specific assessments of wetland degradation within each offset site;
 - Prioritise wetlands to be rehabilitated based on the assessment undertaken;
 - Recommend key actions to rehabilitate each wetland with each offset site;
 - All recommendations must be in line with the WET-Rehab Methods published by the Water Research Commission (2009);
 - Develop measurable indicators of progress and success for the plan (for each of the offset sites);
 - Identify if there is a requirement for environmental authorisation associated with any of the recommended wetland rehabilitation activities;
 - Cost the measures to rehabilitate the wetlands within each offset site;
 - Solicit inputs from communities and stakeholders regarding the draft plans;
 - Compile the site-specific wetland ecosystem rehabilitation plans; and
- All recommendations must be in line with the WET-Rehab Methods published by the Water Research Commission (2009) and all the Rehabilitation plans must include details of each intervention to be implemented, preliminary construction drawings and all necessary documentation required by applicable legislation as well as financial estimate (As far as possible)
- c) Rangeland rehabilitation and management component for each of the offset sites.
- Using the existing information as a foundation, assess the current status of rangelands at each site (including grassland species composition, the extent of accelerated soil erosion, land degradation, fire regimes and impact of current management practices) for applicable control and management for ecosystems rehabilitation of grassland, forests, wetlands, riverine areas and other ecosystems rehabilitation plans.
 - Identify priority species and habitats that require special consideration (including forests, riparian areas) in the management of the rangelands of the offset sites.
 - In consultation with affected communities and stakeholders, identify appropriate measures for the sustainable management of rangelands (including grazing systems, appropriate stocking densities, appropriate fire management) that take into account the

need to support local livelihoods, the impacts of climate change, the need for ecosystem resilience, and biodiversity conservation requirements.

- Develop measurable indicators of progress and success for the plan (for each of the offset sites).
- Cost the identified rangeland rehabilitation management measures within each offset site.
- Involve local communities within the project area in all to obtain recreational benefit and ecosystem goods and services where the local people would benefit when conserving these sites/land parcels; and
- Compile the site-specific ecosystem's rehabilitation plans.

Deliverables:

- Inception/ implementation plan on how the programme will be carried out
- Establish and submit to ECPTA a file and record for each candidate offset site containing all relevant documentation, including shapefiles or geodatabases for all spatial data generated.
- Present site-specific plans results:
- Submit PowerPoint presentation in advance.
- Present virtually/physically the developed site-specific plans results at the ECPTA Review Panel of ecologists.
- Submit proof of quality control for the site-specific plans.
- Submit to ECPTA both hard and electronic copies of site-specific plans reports;
- The final deliverable should include an overarching Biodiversity Management Plan which will be the primary overarching document for protected area planning and the management of biodiversity within each of the sites; and
