1. Introduction

The Transnet Freight Rail Network Construction (RNC) - Fuel Depots department is responsible for several diesel depots/sites, which each consist of a Tank Farm, Pump House, Refuelling Facility and Decanting Facility. These areas are the infrastructure that provides availability for the refuelling of diesel locomotives and decanting of fuel into the above ground storage facilities. In this way, fuel is made readily available for diesel locomotives which need to refuel.

The above-mentioned areas which make up Fuel Depot, contain equipment (such as pumps, hoses, nozzles, etc) which need to be maintained, and cleaned as required. Millwrights play a pivotal role in ensuring the functionality and safety of these crucial facilities. However, the effectiveness of millwrights is heavily reliant on the consumables at their disposal.

Consumables are therefore critical to procure for the following reasons:

- Maintaining a clean and hazard-free environment in fuel depots, preventing accidents, and adhering to South African environmental regulations.
- Regular cleaning and maintenance to preserve and extend the lifespan of equipment.
- Cleaning equipment to prevent pollutants from entering the surrounding environment.

In conclusion, the procurement of consumables, is essential to the efficient and safe functioning of fuel depots. Millwrights rely on these resources to perform their duties, ensuring the maintenance and cleaning of critical machinery, compliance with regulations, and the prevention of costly downtime. By investing in the right consumables, Fuel Depots protects their assets and reputation.

2. Objectives

The procurement of Consumables described in the introduction are to be delivered to the each of the 4 depots listed under Address List section, in the Quantities listed in the Bill of Quantities. The objectives of this project are listed as follows:

- Ensure that consumables are delivered promptly to meet scheduled maintenance and repair needs.
- Ensure that all delivered consumables and equipment meet South African safety standards and regulatory requirements.
- Provide appropriate documentation for the safe and effective use of consumables.

3. Address list

All consumables to be delivered to the addresses listed below.

Depot	Site Location	
Belville	Street Address	Caledon Street
	Town	Klawer
	Province	Western Cape
	Postal Code	8145
Sentrarand	Street Address	Du Randt Road Putfontein
	Town	MTV Building Sentrarand
	Province	Gauteng
	Postal Code	1513
Bloemfontein	Street Address	Transnet Road
	Town	Linquinda, Bloemfontein
	Province	Free State
Masons Mill	Street Address	Moses Mabhida Road
	Town	Pietermaritzburg
	Province	KwaZulu Natal
